

# Browser Manual (en)

## Browser - TYPO3 without PHP

Publish your data in list and single views! You don't need neither any own plugin nor any line PHP code. The Browser - TYPO3 without PHP - provides an index browser (a-z), a page browser, a record browser, a search form, filters, category menus, AJAX, GoogleMaps and OpenStreetMap by default.

Your data will be detected as objects, i.e. images will be wrapped automatically.

SEO - Search Engine Optimization - is supported.

The Browser enables the development of TYPO3-Extensions without any line PHP. TYPO3 developers and TYPO3 integrators will be eight times faster! The browser is very suitable for database development.

Version: 4.1.23 - 2012-10-23

Extension Key: browser\_manual\_en

## Screen shots

### Key image: Develop TYPO3 eight times faster!

Illustration 1: Amazing - you need one line TypoScript to render an image.

Revolution for TYPO3 developers and TYPO3 integrators: If you like to publish your own database, you don't need any own plugin nor any line PHP code. The Browser – TYPO3 without PHP – investigate your database relations and your database fields. The extension turns every field of the database into a TypoScript object. Developers can save up to 85 percent of their operating expense.

## Backend

The Browser flexform manages 10 tabs.

### Plugin check

Selected Plugin: Browser - TYPO3 without PHP

Plugin Options:

- Plugin check
- General
- List View
- Single View
- Templating
- jQuery & AJAX
- Marker

Congratulations! Your configuration is checked. Everything seems ok!

- If you get an unexpected result nevertheless, please check with the TYPO3 Browser Update Assistant, if your plugin and if your TypoScript is up-to-date. You enable the Update Assistant in the extension manager.
- If you get an unexpected result nevertheless, you can enable the DRS - the Development Reporting System. You will get a report with all rendered SQL queries among others. You enable the DRS in the extension manager.
- If you have any question about the Browser, please refer to the online manual [Browser](#). If you need interactive help, please post your question in the [TYPO3 Browser Forum](#). Posts are welcome in English and German.

Don't use the DRS - the Development Reporting System - for this plugin

I'm not interested in DRS logs of this plugin.

Frontend-Debugger for Javascript / AJAX

Debug it!

Marker

Remove marker, which weren't replaced

Illustration 2: Tab [Plugin check]

The Browser checks your configuration automatically. If there is a failure, the Browser will report it and tries to propose a solution. More information at "Self-acting configuration test" on page 57 below

### General

Views

Add links to social media with one mouse click.

## Extend it!

Plugin check   General   List View   Single View   Templating   jQuery & AJAX   Marker & RealUrl   Social Media   TCA   Extend it!

**Calendar 1. step: user interface**

You can extend the Browser with a Calendar user interface:

1. You have to add the plugin "Browser Calendar" to this page.
2. Then select the added plugin here.

The plugin Browser Calendar is a powerful user interface for setting up a calendar.  
It is a ncco, to configurc thc TypoScript view too.  
If you have any question, please refer to the online manual [Browse- Calendar](#).

**Calendar 2. step: view**

**Calendar 3. step: field date begin**

**Calendar 4. step: field date end**

Illustration 9: Tab [Extend it!]

You can extend the Browser with a calendar.

## Browser Calendar

Be aware: the Browser in version 4.0 supports a day schedule only!

### Plugin check

The screenshot shows a tabbed interface with the 'Plugin check' tab selected. A green success message box contains the text: 'Congratulations! Your configuration is checked. Everything seems ok!' Below it, three items are listed:

- 1 Please set a link in the Browser plugin in the tab [Extend it!] to this plugin!
- If you have any question about the Browser Calendar, please refer to the online help. If you need interactive help, please post your question in the [TYPO3 Browser Forum](#). Posts are moderated.
- If you get an unexpected result in the frontend, please enable the DRS - Development and Release System extension manager of the Browser. Select the option [Calendar]. You will get a real Calender User Interface.

Illustration 10: Tab [Plugin check]

The Browser Calendar checks your configuration automatically. If there is a failure, the Browser Calendar will report it and tries to propose a solution.

### Day schedule

The screenshot shows the 'Day' tab of the configuration interface. It includes the following settings:

- Schedule: visibility: Display it! (default)
- Schedule: starting point: Absolute
- Schedule: start from this day: 13-6-2011 (with a calendar icon)
- Schedule: begins at: 08:00
- Schedule: ends at: 22:00
- Schedule: time unit: 3 hours
- Navigator: visibility: Don't display it!

Illustration 11: Tab [Day]

Configure the day schedule.

## Frontend

### Wine catalogue

This is a demo only. This site demonstrates the Browser – the TYPO3 frontend engine – in a localized context. Wine – the TYPO3 wine catalogue – is the didactical fully international wine – i18n – example from the Browser. Both are available in the TYPO3 repository. More information: [Browser website](#) • [typo3-wine.de](#) is hosted by the IY-UU agency Die Netznashas.

Illustration 12: A wine catalogue

Example with a wine catalogue in three language at <http://typo3-wine.de>. The catalogue is based on the Browser – TYPO3 without PHP. The catalogue is an extension to (extension key: wine).

### TYPO3 user group

The screenshot shows the homepage of the TYPO3 Usergroup Thuringia. It includes a navigation bar with links to Home, Kontakt, and Impressum. The main content area features a news section with several items, a calendar section titled "Veranstaltungen der TYPO3-Usergroup Thüringen" with events like "Treffen an jedem 2. Montag im Monat", and a ticketing system section with a "TICKET" button and a list of tickets.

Illustration 13: Website of a TYPO3 user group

The TYPO3 user group Thuringia/Germany provides a calendar, news, members, locations and a ticket registration based on the Browser – TYPO3 without PHP – at <http://typo3-thüringen.de>. You don't need to configure the functionality by your self: the extension Organiser (extension key: org) will install a similar website with one mouse click. See <http://typo3-organiser.de>

## Green Cars

The screenshot shows a TYPO3-based website for 'Grüne Autos'. On the left, there's a sidebar with a tree view of car models. A red circle highlights the 'Alle Modelle' section and its sub-items like Audi, Opel, and Volkswagen. Another red circle highlights the 'Sortieren' dropdown menu. The main content area displays two car models: a Polo 1.6 TDI BlueMotion Techn. with 3.70 liters CO2 and a Meriva 1.4 LPG EcoFlex with 8.10 liters CO2. The right sidebar contains links for screenshots, developer forums, and an impressum.

Illustration 14: A database for cars with their environment values. Tree view with hierarchical check-boxes is marked in red.

Grüne Autos – in English: green cars – is both a website and a case story. The case story demonstrates to build the green cars database and the frontend with the Browser – TYPO3 without PHP – from the scratch within three hours! The case story is in German only, sorry. See: <http://gruene-autos.org>

## Quick Shop

The screenshot shows a TYPO3-based website for 'Quick Shop'. At the top, there's a search bar with 'Search Word' and a 'Reset' button. Below it, there are product cards for a 'Pullover' (49,99 €), 'Secret Images' (29,99 €), and 'Tasse' (14,99 €). The right sidebar contains links for screenshots, developer forums, and an impressum.

Illustration 15: A online shop

You can manage an online shop based on the Browser – TYPO3 without PHP – and the extensions wt\_cart and powermail. If you like Quick Shop, you can install the whole shop with one mouse click. See: <http://typo3-quick-shop.de>.

## BrowserMaps

### OpenStreetMap

Illustration 16: Draft with OpenStreetMap

### GoogleMaps

Illustration 17: Draft with GoogleMaps

We intend to support GoogleMaps from Browser version 4.4.

# Introduction

The Browser – TYPO3 without PHP – enables developers and integrators to develop own extensions without any own plugin and without any own line PHP code. If you are using the Browser, you will develop TYPO3 eight times faster. The Functional Schematic is illustrated on page 65 below.

## What does it do?

- With one line TypoScript you will get a result list with a search form, a page browser and an a-z-browser for your tt\_news records or for any other tables of any other extension. With one line TypoScript more you will get a single display of your record extended with a record browser.
- The Browser provides data in the frontend from any backend database.
- The extension simplifies the team play of HTML templates and TypoScript.  
Example with tt\_news: The TypoScript code "select = tt\_news.title" and the HTML marker  
####TT\_NEWS.TITLE#### will display news titles in list and single views in the frontend.
- The Browser discovers relations between tables like tt\_news and tt\_news\_cat automatically. It displays data of related tables in list and single views. The extension builds the SQL relations automatically. If it fails, it is possible to configure the relations manually.
- The extension tries to detect the type of fields automatically. It renders images as images and handles documents as documents and displays it with the mime type icon.
- SEO, Search Engine Optimisation, is supported.
- The Browser has its own search engine and it offers filters. You can filter for data areas like 2009 to 2011 or 10.000 EUR to 20.000 EUR. Filter can be check boxes, radio buttons, select boxes, lists and tree views.
- The Browser supports AJAX by default.
- The Browser supports to export data in CSV format and XML format (like RSS feeds).
- BrowserMaps – the Browser map modul – enables you, to publish your data with GoogleMaps<sup>1</sup> and OpenStreetMap.
- The Browser is multiple plugin able: You can use the Browser plugins on a page unlimited.
- Plugins are able to control other plugins. They can hide or display it depending on URL parameters.
- piVars are available in the TypoScript. For example: A user searches for 'browser'. The search word is stored in the piVar tx\_browser\_pi1[sword]. You can display the search word 'browser' in your template with the marker  
###SWORD### everywhere.
- All values from the TYPO3 array \$GLOBALS are available at runtime. \$GLOBALS contains hundred and thousands of values like session ids, the data of the client browser, the data of a current frontend user among others. The Browser enables to design your HTML depending of that values and properties at runtime.
- The Browser is supported by the DRS - Development Reporting System. The DRS displays both errors and workflows. For example: If you have problems with the performance, you can enable the performance report. The DRS investigates bottlenecks and if it will find some, it try to suggest a solution.
- You can extend the Browser with applications out-of-the-box – so called one-mouse-cklick-extensions like Organiser and Quick Shop. You can install the TYPO3 swiss knife (org) or the online shop quick\_shop – based on the Browser - with sample data and ready configured by one mouse click.
- The Browser is a team player: with the extensions wt\_cart and powermail you are able to build your own webshop without any own line PHP.
- The Browser supersedes the template engine Smarty.

## What do you need?

- Experience in TypoScript.
- The extension devlog, if you want to use the DRS – the Development Reporting System.

## 100% open source, 100% costless

- The Browser is 100% open source and 100% costless.

<sup>1</sup> We intend to support GoogleMaps from version 4.4

- We don't like so called premium versions or latest version with costs. The unwanted effect is: this models slowdown development by third parties like you or other agencies.
- We like a powerful TYPO3 community and a common development supported by integrators and developers.
- The latest Browser version is available at the SVN repository of TYPO3.

## Audience

- TYPO3 integrators, who have less knowledge about TYPO3 and TypoScript and have little demands.
- TYPO3 developers and TYPO3 agencies, who have a lot of experience with TYPO3 and TypoScript and have high demands.

## Obligatory Requirements

- Database MySQL

## Non possible features

- The Browser doesn't support versioning.
- The Browser doesn't support different workspaces.
- The Browser hasn't any interface for frontend editing.

# 600 pages documentation, 400 illustrations

The Browser – TYPO3 without PHP – is the best documented TYPO3 extension.

The manual and the 23 tutorials have a volume of more than 600 pages and round about 400 illustrations.

All tutorials are TYPO3 extensions and available in the TYPO3 repository of course.

## 250 additional pages by third party extensions

There are round about 250 pages documentation including tutorials of additional extension, which are based on the browser, like green\_cars, job\_market, org or quick\_shop.

## Tutorial overview

You get an overview in English and German at

- <http://typo3-browser.de/en/browser-tutorials/>

## This manual in PDF

You find this manual as PDF file at

- doc/manual.pdf
- [http://typo3-browser.de/typo3conf/ext/browser\\_manual\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_manual_en/doc/manual.pdf)

## Recommended Tutorials

### Tutorial Basic

It is recommended to read the Tutorial Basic, if you want to become familiar with the Browser.

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_basics\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_basics_en/doc/manual.pdf)

### Tutorial tt\_news

This tutorial demonstrates how to use tt\_news with the Browser – TYPO3 without PHP.

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_tt\\_news\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_tt_news_en/doc/manual.pdf)

## Case Stories

### Fall Studie: gruene-autos.org

Own Database in three hours? The case study demonstrates the workflow. It is in German language only.

Eigene Datenbank in drei Stunden? Die Fall-Studie zeigt, wie es geht. Die Studie ist in Deutsch.

#### Website

- <http://gruene-autos.org>

#### Study

- [http://gruene-autos.org/typo3conf/ext/green\\_cars/doc/fall\\_studie.pdf](http://gruene-autos.org/typo3conf/ext/green_cars/doc/fall_studie.pdf)

Illustration 25: From the scratch to the website

### Case Story: Quick Shop

Build your own web-shop with the Browser! Quick Shop – the fastest shop in the TYPO3 history – is based on the Browser, wt\_cart and powermail. A tutorial does explain step by step how to build your own web shop.

You can install Quick Shop with one mouse click.

See <http://typo3-quick-shop.de>

Illustration 26: Quick Shop – build your own web shop based on the Browser.

# Interactive support – the Browser forum

The Browser has its own forum (leading language is German).

You are welcome to post any question, bug or snippet code at

- TYPO3-Frontend-Engine Browser: Forum  
<http://typo3-browser-forum.de/>

## 300 TYPO3 integrators can help

In October 2012 the forum has

- more than 300 registered TYPO3 integrators and TYPO3 developers
- more than 750 topics with round about 1.700 answers
- with more than three new posts every day.

Illustration 27: The Browser forum

# Quick Installation

## Extension Manager

Open the extension manager, download the extension Browser (extkey: browser) and install it.

Illustration 28: Extension manager (1) with the Browser extension (2)

## What do you need?

This is a trial with tt\_news, because this extension is well known and it is installed very often.

But you can take any other extension, which has own records like tt\_products, cal or your own extension.

You need:

- tt\_news installed
- some tt\_news records

## Add Page, Browser Plugin and Template

Illustration 29: Page browser sample (2) with Browser plugin (3) and template (4)

1. Web > List
2. Add a page to your page tree.  
Call it "browser sample".
3. Add the Browser plugin to the page.  
Call it "[Browser Sample]".  
Set the header type to: [hidden].  
Configure the other properties later (see below).
4. Add an extension template to your page.  
Call it in the format "type\_name-of-your-page\_uid-of-yourTypoScript-template".  
Here: "+page\_browsersample\_1025"

# Configuring

## Template

Configure the extension template.

### [General]

Paste into the field "setup" the code from below.

```
plugin.tx_browser_pi1 {
    views {
        list {
            1 {
                // [String] Name of the view. It will displayed in the plugin/flexform
                name = Browser Sample
                // [String] Select clause (don't confuse it with the SQL select)
                select (
                    tt_news.title,
                    tt_news.datetime,
                    tt_news.image,
                    tt_news.imagealttext,
                    tt_news.imagetitletext,
                    tt_news.image
                )
                // [String] Order By clause (don't confuse it with the SQL Order By)
                orderBy (
                    tt_news.datetime DESC, tt_news.title
                )
            }
        }
        single {
            1 {
                // [String] Select clause (don't confuse it with the SQL select)
                select (
                    tt_news.title,
                    tt_news_cat.title,
                    tt_news.short,
                    tt_news.datetime,
                    tt_news.bodytext,
                    tt_news.image,
                    tt_news.imagecaption,
                    tt_news.imagealttext,
                    tt_news.imagetitletext
                )
            }
        }
    }
}
```

The code should be self-explanatory.

### [Includes]

Add in the tab [Includes] into the field "Include static (from extensions):" the template:

- Browser (browser)

## Browser Plugin / Flexform

### [List View]

Illustration 30: Browser plugin tab [List View]

- Browser plugin tab [List View]
- Field "title": "Browser Sample"

### [Templating]

Illustration 31: Browser plugin tab [Templating]

- Browser plugin tab [Templating]
- Field "Plugin: HTML template: [Browser: Table (browser)] (1)"

### [Behaviour]

Illustration 32: Browser plugin tab [Templating]

1. Tab [Behaviour]
2. Field [Record Storage Page]:  
Please link to the folder with your data (here: tt\_news)
3. Field [Recursive]  
Set it to: infinite

1. TYPO3-Guerilla-Extension?

[Zurück](#)

Illustration 34: Single view

Be aware about the power of the Browser – TYPO3 without PHP:

- You need only one line select for the output.
- The Browser formats datetime (it is a unix timestamp in the database) into a human readable format automatically.
- The Browser renders images automatically.
- The browser is building the relation from tt\_news to tt\_news\_cat automatically.

## Investigate the Browser flexform!

The Browser plugin/flexform has some possibilities for configuration of your views. Investigate it!

## Browser Default Templates

The example above is an example with a Browser default template.

This templates are wonderful, if you want output list and single views very quick. But they are inapplicable for building own designs.

An own design will be the next step probably. In this case read the next section "Quick Start Tutorial" below.

# Quick Start Tutorial

If you like another tutorial for beginners with more depth, please take a look into the tt\_news sample.

It is a sample with an individual design.

## The tt\_news Sample

The Browser Tutorial tt\_news presents a Quick Start. See

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_tt\\_news\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_tt_news_en/doc/manual.pdf)

# Further Steps

## AJAX

Publish your data supported by AJAX!

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_ajax\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_ajax_en/doc/manual.pdf)

## BrowserMaps

Publish your data with GoogleMaps or OpenStreetMap! See

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_map\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_map_en/doc/manual.pdf)

## CSV export, RSS feed, XML

Export your data into a CSV file (comma separated values). Publish your data as RSS feed or in XML:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_rss\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_rss_en/doc/manual.pdf)

## Images

Size images and use galleries:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_images\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_images_en/doc/manual.pdf)

## Filter

Filter your data with dynamic filters and tree-views:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_search\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf)

## Labelling

Label your fields:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_labeling\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_labeling_en/doc/manual.pdf)

## SEO - Search Engine Optimisation

Optimise your output for search engines:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_basics\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_basics_en/doc/manual.pdf)

## Templating

Build your own templates and integrate it into the Browser plugin/flexform:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_template\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_template_en/doc/manual.pdf)

# Update

## The Update Wizard checks deprecated TypoScript

The Update Wizard reports frontend messages, if your TypoScript code isn't proper in context with updating.

Messages are in English or German, depending on the language of the website.

Schiffe 

### Alle Schiffe der Tecklenborg-Werft

Type Script-Update-Assistent

**☒ A-Z-Browser Standard-Tab**

Der A-Z-Browser Standard-Tab konnte bis zur Version 2.6.2 nicht übersetzt werden.  
Wir haben den Typ von String auf Integer umgestellt. Der Wert ist jetzt die ID eines Tabs statt wie bisher eines Namens. Ändern Sie den Code wie im Beispiel unten erläutert.

Ticket: 0001

 Sie müssen Ihren Type Script-Code aktualisieren.

Jetziger Code  
`a-z_Browser.defaultTab = Alle`

Neuer Code  
Beispiel: Wenn der erste Tab der Standard-Tab sein soll und dieser die ID 0 hat (siehe auch a-z\_Browser.tabs):

`a-z_Browser.defaultTab = 0`

Geschichte Daten und Maße Antrieb Probefahrt Konstruktion Dokumente

### Liste der Schiffe mit Bildern und Stapellaufdatum

◆ Schiff	◆ Bilder	◆ Stapellauf	◆ Verbleib des Schiffes
Aachen		1923-03-20	1951 auf Felsen getrieben und auseinandergebrochen.
Adamsturm		1909-10-26	1917 nach Torpedotreffer gesunken.
Adjudant		1894-08-00	1915 von britischen Kriegsschiffen gekapert.

Illustration 35: Example of a report in the frontend

## You can use the Update Wizard in every operative Systems

All messages are protected for clients with the defined IP address (see below).

## Enable the Update Wizard

Illustration 36: Enable the Update Wizard

This is your work flow:

1. Modul > Admin Tools > Extension Manager
2. Please select the Browser extension
3. Select the tab [Configuration]
4. Select the category [Update Wizard]
5. Enable the Update Wizard
6. Allow the frontend reporting for clients with your IP: Copy and paste your IP into the field [Update Wizard Allowed IPs].

## Details for older versions

### From every version

If you have an unexpected result in the frontend, it is recommended to enable the Update Wizard and check for deprecated TypeScript.

### From version < 4.0

#### A-Z-Selector is renamed as Index Browser

The a-z-browser is renamed as index browser. This has the effects:

- CSS : azSelector -> indexBrowser
- HTML templates : AZSELECTOR -> INDEXBROWSER  
: AZSELECTORTABS -> INDEXBROWSETABS
- piVar : azTab -> indexBrowserTab
- TypeScript : navigation.a-z\_Browser -> navigation.indexBrowser

#### HTML templates

If you are using your own HTML templates, please do the following:

- rename azSelector as indexBrowser
- rename AZSELECTOR as INDEXBROWSER

#### CSS

If you are using your own CSS files, please do the following:

- rename azSelector as indexBrowser

### From version < 3.5

#### Valid HTML Forms

If you are using HTML templates, which are provided by the browser,  
you don't have to care about the lines below.

If you are using your own templates, please check, if you have to adapt some configurations.

The selectbox for ordering records has now a valid HTML code.

Because of this there are several changes:

- res/default\_ul.tmpl got a new template with the marker ###TEMPLATE\_SELECTBOX\_VALID###
- res/sample/tt\_news/default.tmpl got a new template with the marker ###TEMPLATE\_SELECTBOX\_VALID###

If you are using an old template with the marker ###TEMPLATE\_SELECTBOX###, please add the code from a default template with the marker ###TEMPLATE\_SELECTBOX\_VALID### to your template. The browser will take this code for your selectbox.

Some values in the TypeScript are changed. See

```
plugin.tx_browser_pi1 {
    displayList {
        selectBox_orderBy {
            ...
        }
    }
}
```

Search for comments "... upto 3.4.5"

## AJAX

Because of the new AJAX module is some code added to the HTML templates. If you want to use AJAX with your own "old" templates, please take a look in the tutorial AJAX:

- Browser Tutorial AJAX (en)  
[http://typo3.org/extensions/repository/view/browser\\_tut\\_ajax\\_en/current/](http://typo3.org/extensions/repository/view/browser_tut_ajax_en/current/)

## Default Templates

We kicked off the template #####TEMPLATE\_SINGLE\_IMGTXT#####

## From version < 3.0

### TypeScript Update Assistant

Use the TypeScript Update Assistant (see below).

#### Save the Plugin

Illustration 37: Save the Plugin

Please save the plugin. The Browser will miss data without saving. I.e.: The a-z-browser won't be displayed probably.

#### Constants Editor

Illustration 38: Constants Editor

Some TypeScript properties are moving to the plugin. The constants editor lost:

- displaySearchForm
- displayPageBrowser
- displayAzBrowser
- autoSQLrelSimple
- autoSQLrelIMM

## Backbutton

The backbutton has the stdWrap property from version 3.0.

The backbutton in a single view was a qualified URL back to the list view up to version < 3.0. Now it is a Javascript link: It is quicker and we don't have trouble with piVars like the sword, which will generates an unwanted URL with all sword values back to a list view.

```
plugin.tx_browser_pi1 {
    displaySingle {
        display {
            backbutton = 1
            backbutton {
                data = LLL:EXT:browser/pi1/locallang.xml:back
                wrap = <a href="javascript:history.back()">|</a>
            }
        }
    }
}
```

The locallang.xml value back become new values

- "Back to the list view" became "Back"
- "Zurueck zur Liste" became "Zurueck"

## Self-defined markers

We extended the browser with self-defined markers. If you don't want use the default configuration please

1. delete in the default template (file: static/setup.txt)
  1. the self-defined marker #####TITLE####
  2. the reset button, if you don't want any reset button.
2. delete in the static template
  1. the whole marker array

```
plugin.tx_browser_pi1.marker >
2. or markers in particular.
```

```
plugin.tx_browser_pi1.marker.my_title >
plugin.tx_browser_pi1.marker.my_url >
plugin.tx_browser_pi1.marker.my_reset >
```

## Security

There is a new array advanced.security.

- A sword word need now three chars at least.
- The %-char gets an slash.

If you don't like this new behavior, please configure the security.sword array

```
plugin.tx_browser_pi1.advanced {
    security {
        sword {
            minLenWord = 3
            addSlashes {
                csvChars = %
            }
        }
    }
}
```

# Reference

## General (global arrays)

Property:	Data type:	Description:	Default:
template	array -> Local	<p>Integration of your template in the Browser plugin/flexform</p> <p><b>Tutorial:</b>  <a href="http://typo3.org/documentation/document-library/extension-manuals/browser_tut_template_en/current/">http://typo3.org/documentation/document-library/extension-manuals/browser_tut_template_en/current/</a></p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil {     template {         extensions {             // BEGIN of your configuration             // [String/Array] extension key             org {                 // [String/Array] template name (inern)                 news {                     // [String] name for plugin/flexform                     name = Org: Nachrichten                     // [String] path to the template                     file = EXT:org/res/news/401/default.tml                     // [Integer/CSV] Comma seperated list of                     // the views id, which can process                     // the template                     csvViews = 401                 }             }         }     } }</pre>

marker	-> Local		
_LOCAL_LANG	array	See the reference table "_LOCAL_LANG" below (page 53)	

## Local (every view)

Local is a special property of the Browser:

- Every general property is the default for all views.
- But you can copy the properties to every view.  
Thus it is possible to configure each view differently with a minimum off input

### Example

The case: you need for the list view 1 another template.

Line 2: You copy the property array template

Line 3: You change the value of the field you need.

The benefit is, that the changing has no effect to other views.

```
1.plugin.tx_browser_pil.views.list.1 {
2.    template < plugin.tx_browser_pil.template
3.    template.file = fileadmin/templates/my tmpl
4.}
```

There is another example for the property displayList in the tutorial "Tutorial Basics".

Property:	Data type:	Description:	Default:
template	array	<p>file: Path to the default HTML template.</p> <p><b>Tutorial:</b> See "Tutorial Basics"</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.template {     file = EXT:browser/res/default tmpl }</pre>	See the example
autoconfig	-> autoconfig		
localTable	string / array	<p>file: Path to the default HTML template.</p> <p><b>Tutorial:</b> See "Tutorial Basics"</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.template {     localTable = tt_news     localTable {         uid = uid         pid = pid     } }</pre>	
upload	string	<p>Path to upload folder of your images or documents</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1 {     upload = uploads/tx_ships }</pre>	empty
general_stdWrap	array	<p>Text will be wrapped as RTE-Text, but without any &lt;p&gt;-tags. If a field has the property handleAs = text, it won't be processed with general_stdWrap but with displayList.content_stdWrap or displaySingle.content_stdWrap. See the example in displaySingle.content_stdWrap.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1 {     general_stdWrap &lt; lib.parseFunc_RTE     general_stdWrap {         parseFunc {             nonTypoTagStdWrap {                 encapsLines {                     nonWrappedTag &gt;                 }             }         }     } }</pre>	See the example
document_stdWrap	array	<p>Wrapping of fields which should handled as documents.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1 {     document_stdWrap {         icon = 1         stdWrap {             noTrimWrap =              }     } }</pre>	See the example

Property:	Data type:	Description:	Default:
displaySingle	array	<p>Configuration of</p> <ul style="list-style-type: none"> <li>• the display of markers in the frontend and</li> <li>• images</li> <li>• in a single view.</li> </ul> <p>It is nearby the displaySingle property in the extension tt_news. If you want to know more, please read the Reference in the tt_news manual. The SEO fields title, description and keywords have the stdWrap property.</p> <p><b>Tutorials:</b>  <a href="#">Tutorial Basics</a>  <a href="#">Tutorial Images</a></p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.displaySingle {     seo {         htmlHead {             title = 0             meta {                 description = 0                 keywords = 0             }         }         display {             title = 1             table {                 summary = 1                 caption = 1             }             backbutton = 1             searchform {                 wrapSwordInResults = 1                 wrapSwordInResults {                     0.wrap = &lt;span style="background:#fffff7f"&gt; \  &lt;/span&gt;                     ...                 }             }             templateMarker = ###TEMPLATE_SINGLE###             imageCount = 4             imageWrapIfAny =                 &lt;div class="news-single-img"&gt;   &lt;/div&gt;             content_stdWrap {                 parseFunc &lt; lib.parseFunc_RTE             }             caption_stdWrap {                 wrap =                     &lt;p class="news-single-imgcaption"&gt;   &lt;/p&gt;                 trim = 1             }             imageBoxWrap {                 // [String] Wrap code for every \                 image/imagecaption block                 wrap = &lt;span class="single-imagebox \ single-imagebox-###IMAGE_COUNT###"&gt;   \                 &lt;/span&gt;             }         }     } }</pre>	See the example

Property:	Data type:	Description:	Default:
		<pre> image {     // [String] path and file name of the image, \     which should displayed, if a record hasn't \     any image file = EXT:browser/res/images/\         alternate_image_400x300.gif file.maxW = 240 file.maxH = 180 wrap = imageLinkWrap = 1 imageLinkWrap {     enable = 1     bodyTag = &lt;body bgColor="#ffffff"&gt;     wrap = &lt;a href="javascript:close();"&gt;   &lt;/a&gt;     width = 500m     height = 500     JSwindow = 1     JSwindow {         newWindow = 1         expand = 17,20     } } firstImageIsPreview = 0 forceFirstImageIsPreview = 0 } </pre>	

Property:	Data type:	Description:	Default:
displayList	array	<p>Configuration of</p> <ul style="list-style-type: none"> <li>the display of markers in the frontend and</li> <li>images</li> <li>in a list view.</li> </ul> <p>It is nearby the displayList property in the extension tt_news. If you want to know more, please read the Reference in the tt_news manual. The SEO fields title, description and keywords have the stdWrap property.</p> <p><b>References:</b> See n.displayList.display on page 51.</p> <p><b>Example:</b></p> <pre> plugin.tx_browser_pi1.displayList {     singlePid =     seo {         htmlHead {             title = 0             meta {                 description = 0                 keywords = 0             }         }         display {             searchform {                 ...                 wrapSwordInResults = 1                 wrapSwordInResults {                     0.wrap = &lt;span style="background:#ffff7f"&gt; \                                 &lt;/span&gt;                 }                 ...             }             table {                 summary = 1                 caption = 1             }             jssAlert = 1         }         templateMarker = ###TEMPLATE_LIST###         # Don't display caption in List view         caption_stdWrap.if.directReturn = 0         imageCount = 1         imageWrapIfAny =         imageBoxWrap {             // [String] Wrap code for every \             // image/imagecaption block             wrap = &lt;span class="list-imagebox \                         list-imagebox-###IMAGE_COUNT###"&gt;   \                            &lt;/span&gt;         }         image {             // [String] path and file name of the image, \             // which should displayed, if a record hasn't \             // any image             file = EXT:browser/res/images/\                         alternate_image_400x300.gif             file.maxW = 120             file.maxH = 90             imageLinkWrap = 1             imageLinkWrap {                 enable = 1                 bodyTag = &lt;body bgColor="#ffffff"&gt;                 wrap = &lt;a href="javascript:close();"&gt;   &lt;/a&gt;                 width = 500m                 height = 500                 JSwindow = 1                 JSwindow {                     newWindow = 1                     expand = 17,20                 }             }         }     } } </pre>	See the example  singlePid: Default is the current page id

Property:	Data type:	Description:	Default:
		<pre>master_templates {     selectbox = SELECTBOX     selectbox {         ... -&gt; See "Browser Tutorial Search"     } }</pre>	
displayList.selectBox_orderBy		<p>You will get a select box for ordering records in the list view, if you don't use the marker ###ITEM###.</p> <p><b>Tutorial:</b> Browser Tutorial Marker (en)</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.displayList {     selectBox_orderBy {         // [Boolean] 1: Display the select box for         // ordering (default), 0: don't display.         display = 1         templateMarker = ###TEMPLATE_SELECTBOX_VALID###         selectbox = SELECTBOX         selectbox {             ...         }     } }</pre>	
andWhere	-> array	See the property "n.andWhere" below (page 48)	
advanced	-> array	See the section Advanced below	
views.list	-> view.list	See table "views.list" below on page 37.	
views.single	-> view.single	See table "views.single" below.	
_LOCAL_LANG	-> _LOCALLANG	See table "_LOCAL_LANG" below on page 53.	

## Advanced

You should configure the array advanced only, if you are familiar with the Browser.

Advanced is local available. TypoScript snippet:

```
1.plugin.tx_browser_pi1.views.single.1 {  
2.    advanced < plugin.tx_browser_pi1.advanced  
3.    advanced.sql.devider.childrenRecords >  
4.}
```

Property:	Data type:	Description:	Default:
development	array	Please read the comment in the TypoScript code. And sorry, that there isn't any other documentation.	
performance	array	Please read the comment in the TypoScript code. And sorry, that there isn't any other documentation.	
recursionGuard	int	The Browser uses some methods recursive. The recursion guard prevents unlimited loops and take care about performance.  You can increase the value of the recursion guard.  <b>Example:</b> <code>plugin.tx_browser_pi1.advanced {     recursionGuard = 10000 }</code>	10000
localization	-> array	See the section Localization below.	
realUrl	-> array	See the section realUrl in the Reference below.	
security	array	Please read the comment in the TypoScript code. And sorry, that there isn't any other documentation.	
sql	array	Please read the comment in the TypoScript code. And sorry, that there isn't any other documentation.	
tca	array	Please read the comment in the TypoScript code. And sorry, that there isn't any other documentation.

### realURL

Property:	Data type:	Description:	Default:
realURL	array	<p>Array for configuring realURL in context with localisation.</p> <p>defaultLanguageLink (boolean):</p> <ul style="list-style-type: none"> <li>• Default: 1</li> <li>• 0: Link to the single with the uids of the current records</li> <li>• 1: Link to the single with the uids of the default language records</li> </ul> <p><b>Background:</b>          The extension realurl is using the uid of the default language records usually.          - Advantage             <ul style="list-style-type: none"> <li>• You can switch the languages in single mode.</li> </ul>         - Disadvantage             <ul style="list-style-type: none"> <li>• The realurl path is using the record segment in default language in every language</li> </ul>         You change this behavior:          The extension realurl is using than the uid of the current record.          - Advantage             <ul style="list-style-type: none"> <li>• The realurl path is using the record segment in the current language.</li> </ul>         - Disadvantage             <ul style="list-style-type: none"> <li>• You can't switch the languages in single mode.</li> </ul> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.advanced.localisation {     realURL {         defaultLanguageLink = 1     } }</pre> </p>	1

## TCA

Property:	Data type:	Description:	Default:
TCA	array	<p>Array for configuring TCA behavior in context with localisation.</p> <p>TCA.field.appendix (string): Fields with this appendix will be used for translation. I.e. The overlay value from tt_news_cat.title_lang_ol will overwrite the value in tt_news_cat.title</p> <ul style="list-style-type: none"> <li>• Default: lang_ol</li> </ul> <p>TCA.value.devider (string): Devider for separating language entries like de:Aufmacher fr:Accroche or Aufmacher Accroche</p> <ul style="list-style-type: none"> <li>• Default:  </li> </ul> <p>TCA.value.langPrefix (boolean):</p> <ul style="list-style-type: none"> <li>• Default: 1</li> <li>• 1: lang_ol values have a lang_prefix like en:Lead Story de:Aufmacher fr:Accroche</li> <li>• 0: lang_ol values are without lang_prefix like Lead Story Aufmacher Accroche</li> </ul> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.advanced.localisation {     TCA {         field {             appendix = _lang_ol         }         value {             devider =               langPrefix = 1         }     } }</pre>	lang_ol   1

## realUrl.linkToSingle

```
plugin.tx_browser_pi1.advanced.realUrl.linkToSingle
```

### Tutorial

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_realurl\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_realurl_en/doc/manual.pdf)

### realURL

Property:	Data type:	Description:	Default:
realURL	array	<p>Array for configuring realURL in context of SEO - Search Engine Optimisation.</p> <p>You can control links to a single view with the properties below. You can add your own piVars, if it would be necessary.</p> <p><b>Background:</b> It would be the best to have a link to a single view only with the page id and the id of the record. Than you will have a short URL and a unique URL. If you have some more parameters, they will enable to visit the same content with different URL. Search Engines don't like this, because it seems, that you provide double content.</p> <p><b>Tutorial:</b> Browser Tutorial RealURL (en), extkey: browser_tut_realurl_en</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.advanced.realUrl {     linkToSingle         realURL {             dont_display_piVars = 1             dont_display_piVars {                 azTab      = 1                 mode       = 1                 pointer   = 1                 plugin    = 1                 sort      = 1                 sword     = 0             }         } }</pre>	

# Registers

The Browser stores some data in registers. This data is available while runtime by TypoScript.

## Defined registers

### In context with rows and columns

- `browser_numColumn`  
Counter for columns (elements). First column has the number 0.
- `browser_numColumnFirst`  
If the current columns (current element) is the last one, this register is true.
- `browser_numColumnLast`  
If the current columns (current element) is the last one, this register is true.
- `browser_numColumnOdd`  
If the current column (current element) has an odd number, this register is true.
- `browser_numRow`  
Counter for rows (records). First row has the number 0.
- `browser_numRowFirst`  
If the current row (current record) is the first one, this register is true.
- `browser_numRowLast`  
If the current row (current record) is the last one, this register is true.
- `browser_numRowOdd`  
If the current row (current record) has an odd number, this register is true.

### In context with file management:

- `ICON_REL_PATH`
- `filename`
- `path`
- `fileSize`
- `fileExtension`
- `Description`

### In context with search engine optimisation:

- `browser_htmlTitleTag`
- `browser_description`
- `browser_keywords`

Registers are available in list views and in single views.

The registers contain the values from the first record in the list view and the values from the current record in the single view.

## How do you use registers?

### TypoScript snippet with `ICON_REL_PATH`

```
10 = IMAGE
10 {
  file {
    import {
      data = register : ICON_REL_PATH
    }
  }
}
```

## TypeScript snippet with browser\_htmlTitleTag, browser\_description, browser\_keywords

```
page {
    config {
        noPageTitle = 2
    }
    headerData {
        20 = TEXT
        20 {
            data = register:browser_htmlTitleTag
            ifEmpty {
                field = title
                noTrimWrap = |TYPO3 Organiser: ||
            }
            wrap = <title>|</title>
        }
    }
    meta {
        description {
            field >
            data = register:browser_description
        }
        keywords {
            field >
            data = register:browser_keywords
        }
    }
}
```

## How do you find uncovered registers?

You can find registers by searching the PHP code for

- "register" or
- "\$GLOBALS['TSFE']->register"

## Templating

See Tutorial Templating:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_template\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_template_en/doc/manual.pdf)

## views.list

Property:	Data type:	Description:	Default:
<i>n</i>	array	<p>Array with your list views.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {   1 {     ...   } }</pre>	
<i>n.name</i>	string	<p>Name of the list view. Name will be displayed in the plugin.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {   1 {     name = Organiser: Events   } }</pre>	
<i>n.template</i>	array	<p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {   1 {     template &lt; plugin.tx_browser_pil.template     template {       ...     }   } }</pre>	See table Local
<i>n.relations.type</i>	array	<p>Array with your database relations.  <i>type</i> is mm only until now.</p> <p><b>Commendation:</b>          You can build the relation for all possibilities you need and copy it to every view (like the example above).          Browser will use only the relations, it need for building the query of the view.</p> <p><b>Tutorial:</b>  <a href="#">Tutorial Database</a></p> <p><b>Debugging:</b>          See "Debugging SQL statements" on page 59.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {   1 {     relations.mm = ...     ...   }   2 &lt; .1 }</pre>	
<i>n.record</i>	array	<p>Array with</p> <ul style="list-style-type: none"> <li>the uid field name of the main record (the record with the id for the link to a single view)</li> <li>the pid field name of the main record.</li> </ul> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {   1 {     record {       uid = tx_ships_main.uid       pid = tx_ships_main.pid     }   } }</pre>	

Property:	Data type:	Description:	Default:
<i>n.select</i>	string, stdWrap	<p>The query with the field names, which you want display in the frontend. You don't need the uid and the pid of the main record (see property record above). Browser builds SQL statements according to the limit by TYPO3 - i. e. fe-user-rights, hidden records.</p> <p><b>Tutorial:</b>          See Tutorial Quick Start above          Tutorial Basics</p> <p><b>Debugging:</b>          See "Debugging SQL statements" on page 59.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {   1 {     select = tt_news.title, tt_news_cat.title   } }  plugin.tx_browser_pi1.views.list {   1 {     select = COA     select {       10 = TEXT       10 {         value = tt_news.title         lang {           de = tt_news.title_de         }         wrap =  ,       }       20 = TEXT       20 {         value = tt_news_cat.title         lang {           de = tt_news_cat.title_de         }         wrap =  ,       }     }   } }</pre>	
<i>n.showUid</i>	string	<p>You can set the name for the piVar[showUid]. It is helpfull, if you are use more than one plugin with different databases like 'tt_news' and 'fe_users' for example - and if your are using realUrl.</p> <p>In the case below the record id of the first list view will get the parameter tx_browser_pi1[showUid]=X - this is the default, now alias for the showUid isn't configured.          The record id of the second list view will get the parameter tx_browser_pi1[feuserUid]=X</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {   1 {     ...   }   2 {     showUid = feusersUid   } }</pre>	

Property:	Data type:	Description:	Default:
<code>n.select.deal_as_table</code>	array	<p>If you are using the SQL manual mode with aliases, you have to help the Browser to allocate the proper table for operations. There is the array deal_as_table for this case.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         select = or.uid AS `or.uid`, \                   CONCAT(or.or_code, ' ', or.or_name) \                   AS `or.or_name`         select {             deal_as_table {                 0 {                     statement = CONCAT(or.or_code, ' ', \                                       or.or_name) AS `or.or_name`                     alias     = or.or_name                 }             }         }     } }</pre>	
<code>n.groupBy</code>	string, stdWrap	<p>If you like to display your data grouped, please use groupBy. The groupBy won't be a part of the SQL query but will be processed by PHP.</p> <p>Example for stdWrap see <code>n.select</code> above</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         groupBy = tt_news_cat.title     } }</pre> <p>This property is incomplete! If you are using groupBy the A-Z-Browser and the page browser can't count the records proper.</p>	
<code>n.groupBy.dontConsolidate</code>	boolean	<p>If you are group data by a field of a foreign table and you are displaying more than one field from the foreign table, it is possible, that you won't get a proper result. Try dontConsolidate in this case.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         groupBy {             dontConsolidate = 1         }     } }</pre>	0
<code>n.where</code>	string, stdWrap	<p>DANGEROUS! You can write your own where clause. Be aware in case of an own configuration, that you have to configure enable fields like hidden, deleted, starttime and endtime by yourself. Filter doesn't work in case of own where clause.</p> <p>Example for stdWrap see <code>n.select</code> above</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         where = tx_ships_special.uid = 35     } }</pre>	

Property:	Data type:	Description:	Default:
<code>n.andWhere</code>	string, stdWrap	<p>You can add any condition to the where clause.                      If you need a table field in your clause, you have to allocate the table name separated by commas to the value "tables".                      The allocated table names have to be a part of your defined relations.                      Example for stdWrap see <code>n.select</code> above</p> <p><b>Debugging:</b>                      See "Debugging SQL statements" on page 59.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {     1 {         andWhere = tx_ships_special.uid = 35     } }</pre>	
<code>n.orderBy</code>	string, stdWrap	<p>You can sort every view in your own way, if you need it.  <code>orderBy</code> won't be a part of the SQL query but will be processed by PHP multisort since Browser 3.1.0                      Example for stdWrap see <code>n.select</code> above</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {     1 {         orderBy = tt_news.datetime desc, \                   tt_news_cat.title     } }</pre>	Values from the <code>select</code> property
<code>n.orderBy.foreignTable</code>	string	<p>You can order children records (foreign tables) by a SQL query.                      The code will be send as a real SQL query in contrast to the property <code>orderBy</code> above!</p> <p>Foreign table has to be the name of the foreign table like in the example below. It will be used for the table.field marker.                      In the example below the browser will handle the result of the sql query in this way:</p> <ul style="list-style-type: none"> <li>• uid -&gt; <code>tx_org_department.uid</code></li> <li>• title -&gt; <code>tx_org_department.title</code></li> </ul> <p>You will need the marker <code>###UID_LOCAL###</code>. The marker will be replaced by the uid of the current local table.</p> <p><b>Browser Tutorial Database (en):</b>  <a href="http://typo3.org/documentation/document-library/extension-manuals/browser_tut_search_en/current/">http://typo3.org/documentation/document-library/extension-manuals/browser_tut_search_en/current/</a></p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {     1 {         orderBy {             tx_org_department (                 SELECT tx_org_department.uid AS 'uid',                        tx_org_department.title AS 'title'                 FROM tx_org_department,                      tx_org_headquarters_mm_tx_org_department                 WHERE tx_org_headquarters_mm_tx_org_department.\u00b7                       uid_local = ###UID_LOCAL###                 AND tx_org_headquarters_mm_tx_org_department.\u00b7                       uid_foreign = tx_org_department.uid             ORDER BY                 tx_org_headquarters_mm_tx_org_department.\u00b7                 sorting         )     } }</pre>	

Property:	Data type:	Description:	Default:
<i>n.random</i>	boolean	<p>Generate records by a random order.</p> <p><b>Be aware!</b></p> <ul style="list-style-type: none"> <li>random has priority: orderBy will be ignored!</li> <li>the Browser plugin doesn't have to be cached</li> </ul> <p><b>No cache</b> Please use the plugin "Browser (no cache)" The whole page will not be cached!</p> <p><b>Tutorial</b> Browser Tutorial Several Plugins (en) Section: No Cache <a href="http://typo3.org/extensions/repository/view/browser_tut_severalplugins_en/current/">http://typo3.org/extensions/repository/view/browser_tut_severalplugins_en/current/</a></p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         random = 1     } }</pre>	
<i>n.override</i>	array	<p>You can override the parts select, from, where, andWhere and orderBy of any SQL query. Every part is optional. The override option makes sense, if you aren't satisfied with the query statements processed by the browser. Every item has the stdWrap property. Example for stdWrap see <i>n.select</i> above. andWhere has only an effect, if you don't use where!</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1.override {         select = tt_news.title AS 'tt_news.title', \                   tt_news_cat.title AS \                   'tt_news_cat.title'         from   = ...         where   = ...         andWhere = ...         orderBy = ...     } }</pre>	
<i>n.limit</i>	string	<p>Limit the result</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         limit = 0,3     } }</pre>	
<i>n.search</i>	string	<p>You can search in more fields than displayed.</p> <p><b>Tutorial</b> Tutorial Search</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         search = tt_news.title, tt_news.bodytext, \                   tt_news.short, tt_news_cat.title     } }</pre>	Values from the select property

Property:	Data type:	Description:	Default:
<code>n.handleAs</code>	array	<p>You can handle fields in a special way.</p> <ul style="list-style-type: none"> <li>• <code>image</code> will be wrapped as an image. You have to configure the property upload. See table "Local" property upload on page 33.</li> <li>• <code>imageCaption</code> will be wrapped as the image caption.</li> <li>• <code>imageAltText</code> will be wrapped as the image alt tag.</li> <li>• <code>imageTitleText</code> will be wrapped as the image title tag.</li> <li>• <code>document</code> will be wrapped as link to the document with a mime type icon.</li> </ul> <p><b>Tutorial:</b> Tutorial Database</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {   1 {     handleAs {       image      = tx_ships_main.images       imageCaption = tx_ships_main.caption       imageAltText = tx_ships_main.caption       imageTitleText = tx_ships_main.caption       document   = tx_ships_main.documents     }   } }</pre>	
<code>n.csvLinkToSingleView</code>	string	<p>By default every item in the list links to the single view. If you don't want that, use csvLinkToSingleView (comma separated values).</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {   1 {     csvLinkToSingleView = tt_news.title   } }</pre>	
<code>n.document_stdWrap</code>	array	<p>Copy the default configuration from document_stdWrap and change it. Wrapping of documents. See property document_stdWrap in the table "Local" on page 33.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {   1 {     document_stdWrap &lt; \       plugin.tx_browser_pi1.document_stdWrap     document_stdWrap.stdWrap {       noTrimWrap &gt;       wrap = &lt;br /&gt;     }   } }</pre>	See table Local
<code>n.displayList</code>	array	<p>Copy the default configuration from displayList and change it. Wrapping of images and configuration of displaying markers. See property displayList in the table "Local" on page 36.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {   1 {     displayList &lt; \       plugin.tx_browser_pi1.displayList     displayList {       ...     }   } }</pre>	See table Local

Property:	Data type:	Description:	Default:
<code>n.displayList.display</code>	array	<p>If you don't want the item, set the value to 0.</p> <ul style="list-style-type: none"> <li>• <code>table.summary</code>: use the <code>&lt;table summary="..."&gt;</code> property</li> <li>• <code>table.caption</code>: use the <code>&lt;table&gt;&lt;caption&gt;...&lt;/caption&gt;</code> tag</li> <li>• <code>jssAlert</code>: Link to a alert box, if the isn't any single view.</li> </ul> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list.1.displayList {     display {         table {             summary      = 1             caption     = 1         }         jssAlert     = 1     } }</pre>	Like the example
<code>n.table.field</code>	stdWrap	<p>Every table field has the stdWrap property.</p> <p><b>Tutorial:</b> Tutorial Basics</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         tt_news.title {             crop = 10   ...   1         }     } }</pre>	
<code>n.marker</code>	array, stdWrap	<p>Every view has the marker property.</p> <p><b>Tutorial:</b> Tutorial Basics</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {     1 {         marker {             my_marker {                 value   = My Marker                 lang.de = Mein Marker             }         }     } }</pre>	

## views.single

Property:	Data type:	Description:	Default:
<code>n</code>	array	See table views.list	
<code>n.template</code>	array	<p>See property template in the table "Local" on page Error: Reference source not found.</p> <p><b>Tutorial:</b> Tutorial Basics</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.single {     1 {         template &lt; plugin.tx_browser_pil.template     } }</pre>	See table Local
<code>n.relations.type</code>	array	See table views.list	
<code>n.record</code>	array	See table views.list	
<code>n.select</code>	string	See table views.list	
<code>n.andWhere</code>	array	See table views.list	

Property:	Data type:	Description:	Default:
<code>n.orderBy</code>	string	<p>See table <code>views.list</code> amongst others</p> <p><code>orderBy</code> is different from the SQL <code>orderBy</code> statement. There are several causes. One important cause is, that you can't order records from the local table (main table) and foreign tables (children tables) within one SQL query.</p> <p>Since version 3.4.3 it is possible to order children records too. See the example below:</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.list {     1 {         select = ...         orderBy (             tx_organiser_cal_mm_calentrance.sorting,             tx_organiser_calentrance.title         )     } }</pre> <p><b>Comment:</b>          There is this relation in the example above (you can't see it):  <code>tx_organiser_cal</code> -&gt; <code>tx_organiser_cal_mm_calentrance</code> \          -&gt; <code>tx_organiser_calentrance</code>          It is like:          event -&gt; mm table -&gt; entrance fees            The <code>orderBy</code> clause from above will have the effect, that the titles of the entrance fees (values like: "students 10 EUR, adults 16 EUR, ..." will first be ordered by the values of the field <code>sorting</code> in the mm table and second will be ordered by the title.          The browser detects a context between mm tables and foreign tables!          The <code>orderBy</code> clause from above will have any effect to all other children tables.       </p>	Values from the select property
<code>n.orderBy.foreignTable</code>	string	You can order children records (foreign tables) by a SQL query. The code will be send as a real SQL query in contrast to the property <code>orderBy</code> above!  Please refer to <code>views.list</code> above	
<code>n.search</code>	string	See table <code>views.list</code>	Values from the select property

Property:	Data type:	Description:	Default:
<i>n.handleAs</i>	array	<p>You can handle fields in a special way.</p> <ul style="list-style-type: none"> <li>• title headline in the single view</li> <li>• image will be wrapped as an image. You have to configure the property upload. See table "Local" property upload on page 33.</li> <li>• imageCaption will be wrapped as the image caption.</li> <li>• imageAltText will be wrapped as the image alt tag.</li> <li>• imageTitleText will be wrapped as the image title tag.</li> <li>• text will be wrapped as text in the single view in the template image-text.</li> <li>• document will be wrapped as link to the document with a mime type icon.</li> </ul> <p><b>Tutorial:</b>  <a href="#">Tutorial Basics</a>  <a href="#">Tutorial Images</a></p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.single {   1 {     handleAs {       title      = tx_ships_main.title       image      = tx_ships_main.images       imageCaption = tx_ships_main.caption       imageAltText = tx_ships_main.caption       imageTitleText = tx_ships_main.caption       text       = tx_ships_main.history       document   = tx_ships_main.documents     }   } }</pre>	
<i>n.document_stdWrap</i>	array	See table views.list	See table Local
<i>n.displaySingle</i>	array	<p>Copy the default configuration from displaySingle and change it. Wrapping of images and configuration of displaying markers. See property displaySingle in the table "Local" on page 34.</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.single {   1 {     displaySingle &lt; \       plugin.tx_browser_pil.displaySingle     displaySingle {       ...     }   } }</pre>	See table Local
<i>n.table.field</i>	stdWrap	See table views.list	
<i>n.marker</i>	array, stdWrap	<p>Every view has the marker property.</p> <p><b>Tutorial:</b>          See "Self-defined Markers".</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pil.views.list {   1 {     marker {       my_marker {         value = My Marker         lang.de = Mein Marker       }     }   } }</pre>	

## Deprecated properties

### TT\_CONTAINER

The TT\_CONTAINER is deprecated! Use COA instead. See the Tutorial/Manual of Browser for BZD Staff Directory.

#### Tutorial / Manual

- HTTP: [http://typo3.org/extensions/repository/view/browser\\_bzdstaffdirectory/current/](http://typo3.org/extensions/repository/view/browser_bzdstaffdirectory/current/)
- PDF: [http://typo3.org/extensions/repository/view/browser\\_bzdstaffdirectory/current/info/?tx\\_terfe\\_pi1%5BdownloadFile%5D=doc%252Fmanual.pdf](http://typo3.org/extensions/repository/view/browser_bzdstaffdirectory/current/info/?tx_terfe_pi1%5BdownloadFile%5D=doc%252Fmanual.pdf)

TT\_CONTAINER is a short form for **TypoScript Template Container**.

Property:	Data type:	Description:	Default:
tableFieldUid	string	<p>Deprecated!</p> <p><b>Syntax:</b>  <i>table.field</i>: name of the table + dot + name of the field</p> <p><b>Tutorial:</b></p> <p><b>Debugging:</b></p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.single.1 {     ttContainer = TT_CONTAINER     ttContainer {         tableFieldUid = tx_civserv_form.uid         limit = -1         wrap (             &lt;h2&gt;Forms&lt;/h2&gt;             &lt;ul&gt; &lt;/ul&gt;         )         noRecord {             value (                 &lt;h2&gt;Forms&lt;/h2&gt;                 &lt;ul&gt;                     &lt;li&gt;                         There isn't any form.                     &lt;/li&gt;                 &lt;/ul&gt;             )         }         10 = TTC_STDWRAP         10 {             ...         }         20 = TTC_COA         20 {             ...         }     } }</pre>	
limit	int		
noRecord	array ->stdWrap	... has the stdWrap property	
ttc_stdwrap	array ->TTC_STDWRAP		
ttc_coa	array ->TTC_COA		
tt_container	array ->TT_CONTAINER		

## TTC\_COA

The **TTC\_COA** is deprecated! Use COA instead. See the Tutorial/Manual of Browser for BZD Staff Directory.

Property:	Data type:	Description:	Default:
		<p>Deprecated!</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.single.1 {     ttContainer = TT_CONTAINER     ttContainer {         ...         20 = TTC_COA         20 {             ...         }     } }</pre>	

## TTC\_STDWRAP

The **TTC\_STDWRAP** is deprecated! Use COA instead. See the Tutorial/Manual of Browser for BZD Staff Directory.

Property:	Data type:	Description:	Default:
		<p>Deprecated!</p> <p><b>Example:</b></p> <pre>plugin.tx_browser_pi1.views.single.1 {     ttContainer = TT_CONTAINER     ttContainer {         ...         10 = TTC_STDWRAP         10 {             ...         }     } }</pre>	

## \_LOCAL\_LANG

With the \_LOCAL\_LANG array you can control the values of the tabs in the mode selector and the translation for the table fields.

### Tutorials

Label fields

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_labeling\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_labeling_en/doc/manual.pdf)

Use localized tables and extensions:

- [http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_localization\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_localization_en/doc/manual.pdf)

Property:	Data type:	Description:	Default:
_LOCAL_LANG	array	<p>Array with the translations for the tabs in the mode selector, for SEO - Search Engine Optimisation, table summary and table caption and for the fields</p> <p>There are the following rules:</p> <ul style="list-style-type: none"> <li>• Tabs:  <code>view_mode_n</code>          view: list or single          n: number of the view (1, 2, 3, ...)</li> <li>• Tables:          Browser Manual (en) generates HTML tables, which are conform with the guidelines of the Web Accessibility Initiative (WAI).  <code>view_mode_n_summary: &lt;table summary="value"&gt;</code>  <code>view_mode_n_caption: &lt;caption&gt;value&lt;/caption&gt;</code></li> <li>• Fields:  <code>table_field</code>          table: name of the table (i. e. tt_news)          field: name of the field (i. e. title)</li> </ul> <p><b>Example:</b></p> <pre> plugin.tx_browser_pi1 {     _LOCAL_LANG {         default {             list_mode_1 = My tab in the view list 1             list_mode_2 = My tab in the view list 2             list_mode_1_titleTag = My HTML title tag 1             list_mode_2_titleTag = My HTML title tag 2             list_mode_1_keywords = keyword 1, ..., ....             list_mode_2_keywords = keyword 1, ..., ....             list_mode_1_summary = My table summary list 1             list_mode_2_summary = My table summary list 2             list_mode_1_caption = My table caption list 1             list_mode_2_caption = My table caption list 2              single_mode_1 = My tab in the view single 1             single_mode_2 = My tab in the view single 2             single_mode_1_titleTag = ###TABLE.FIELD### ...             single_mode_2_titleTag = ###TABLE.FIELD### ...             single_mode_1_keywords = ###TABLE.FIELD##, ...             single_mode_2_keywords = ###TABLE.FIELD##, ...             single_mode_1_summary = Summary single list 1             single_mode_2_summary = Summary single list 2             single_mode_1_caption = Caption single list 1             single_mode_2_caption = Caption single list 2              tt_news_title = News Header             tt_news_cat_title = Category         }         de {             ...         }     } } </pre>	

# Self-acting configuration test

There are some mistakes and misconfiguration, which will happen very often. A common example is: It is forgotten to include the static template or it isn't set the starting point of your data.

The Browser checks it self-acting!

## The Plugin check

Selected Plugin

Browser

Plugin Options

Plugin check General List View Single View Template

Congratulations! Your configuration is checked. Everything seems ok!

- If you get an unexpected result nevertheless, please check with the TYPO3 Browser extension if your TypoScript is up-to-date. You enable the Update Assistant in the extension settings.
- If you get an unexpected result nevertheless, you can enable the DRS - the Debug Report System - to report with all rendered SQL queries among others. You enable the DRS in the extension settings.
- If you have any question about the Browser, please refer to the online manual [here](#) or post your question in the [TYPO3 Browser Forum](#). Posts are welcome in English.

Illustration 39: The interactive plugin check

If you have avoided the most common mistakes, the first tab of the Browser plugin [Plugin check] will look like in the illustration above:

- Congratulations! Your configuration is checked. Everything seems ok!

The plugin check evaluates if

- the Browser static template is included
- one view at least is configured
- there is a record storage page
- there is an AJAX page object II
- there is an CSV export page object
- the Browser plugin / flexform is saved one at least

Apart from that the plugin check link to the Browser on-line manual and the Browser forum.

The plugin check replaces the former tab [Check list].

# DRS - Development Reporting System

DRS means Development Reporting System. The DRS is supporting the management of TypoScript and if you like to develop the Browser, you will get support too.

You will get information about the work flow and the TypoScript configuration, if you choose one of the options of the DRS (see image below).

The screenshot shows the TYPO3 Backend interface. The left sidebar has sections for WEB, FILE, USER TOOLS, and ADMIN TOOLS, with Extension Manager selected. The main content area is titled 'Browser - TYPO3 without PHP (v3.9.26)' and shows the 'Info' tab selected. A dropdown menu 'Category' is set to 'DEBUGGING (2)'. Below it, the 'DRS - Development Reporting System' extension is listed with the message 'Messages will be written to DevLog (you need the exte...)' and a dropdown menu set to 'Don't log anything'.

Illustration 40: DRS - Development Reporting System

## You need the extension devlog

Without the extension devlog you won't get any message in the backend.

## Configuring devlog

The screenshot shows the TYPO3 Backend interface with the Ext Manager selected in the sidebar. The main content area shows the 'Developer Log (devlog)' extension is installed and active. It has a configuration section for 'Maximum number of rows [maxRow]' set to 10000. A note says 'The extension is installed (loaded and runn...'.

Illustration 41: Maximum number of rows in devlog

The default maximum number of rows is 1.000 in the devlog configuration.

If you want enjoy all devlog messages from the DRS, please set the maximum number of rows to 10.000.

## Options

- Don't log anything  
This should be the default.
- Auto Discover development  
Helpful for investigate TCA issues and the self-acting wrapping of fields.
- Filter and Category Menu
- Labelling Support  
Helpful for investigate Labelling issues (\_LOCAL\_LANG).
- Localisation  
Helpful, if you are want to use localized tables and extensions.

## Debugging \_LOCAL\_LANG

You get a report for every mode select field (tab), every table summary, table caption and every table field, which hasn't any translation in \_LOCAL\_LANG.

Log ID	Severity	Message
6255	Info	fe_db_browser [MN] Mode for cc_devlog: Log all
6256	Warning	fe_db_browser [MS] list_mode_1 hasn't any value in _LOCAL_LANG
6257	Warning	fe_db_browser [MS] list_mode_2 hasn't any value in _LOCAL_LANG
6258	Warning	fe_db_browser [MS] list_mode_3 hasn't any value in _LOCAL_LANG
6259	Info	fe_db_browser [MS] Existing list views: 1, 2, 3

Illustration 43: Logs for missing items in the \_LOCAL\_LANG array

# What's new in 4.0

## Backend filter

[3.9.8]

You can extend the list view in the TYPO3 backend with filters. See

- Browser Tutorial Backend Filter  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_befilter\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_befilter_en/doc/manual.pdf)

## CSV export

[3.9.6]

You can export your data into a CSV file with one mouse click. Please refer to the

- Browser Tutorial CSV, RSS, XML  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_rss\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_rss_en/doc/manual.pdf)

## DAM sample

[3.9.15]

You can use the Browser for publishing data from the DAM extension (Digital Asset Management). See

- Browser Tutorial Download Module  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_downloads\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_downloads_en/doc/manual.pdf)

## Download management

[3.9.3]

You can manage downloads with the Browser. The Browser is counting hits and downloads – the base for TOP 10 lists. Downloads can be protected by the frontend access management of TYPO3. See

- Browser Tutorial Download Module  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_downloads\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_downloads_en/doc/manual.pdf)

## DRS - Warnings and Errors

[3.9.6]

You can select DRS "Warnings and Errors". If you interested in Warnings and Errors only, the DRS report is more clearly.

## Filter: conditions

[3.9.3]

You can define a display condition for a filter.

### Example for a requirement

You have the work flow:

- The visitor should select a category before viewing a list
- The list shouldn't contain the category filter, if a category was selected before

See

- Browser Tutorial Filter and Search  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_search\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf)

## Filter: independent total hits

[3.9.6]

The displayed hits in front of or behind a filter item can calculated independent on the selected filters now. The tab [List view] in the plugin / flexform has the new property "Filter: total hits". Until version 3.9.6 total hits were controlled by the selection of the filters. If you like the former behaviour, you can setting it up here.

## Filter: tree view

[4.1.21]

- Treeview as hierarchical check-box.
- See; Browser Tutorial Filter and Search  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_search\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf)

[3.9.6]

- You can display a category menu as tree view.
- You need the extension cps\_tcatree. This extension enables to order items in a tree view.
- See; Browser Tutorial Filter and Search  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_search\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf)

## GoogleMaps

[4.4.0]

You can publish your data supported by GoogleMaps. See

- BrowserMaps Tutorial  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_map\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_map_en/doc/manual.pdf)

## Manual is split

[3.9.6]

The manual is split into an abstract and a manual in detail.

## OpenStreetMap

[4.1.23]

You can publish your data supported by OpenStreetMap. See

BrowserMaps Tutorial  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_map\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_map_en/doc/manual.pdf)

## Plugin check

[3.9.6]

The Browser evaluates itself: The first tab of the flexform is called [Plugin check]. The tab replaces the tab [Check list]. See "Self-acting configuration test" on page 57 above.

## Record Browser

[4.1.8]

Record browser links back to the list view depending on the last configuration

## Registers

[4.1.13]

The Browser got new registers for the number of the current row (record) and the current column (element). Flags for the properties first, last and odd are supported also.

Registers are documented now. See "Registers" on page 43 above.

## Statistic module

[3.9.3]

The Browser can count hits and downloads. See

- Browser Tutorial Download Module  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_downloads\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_downloads_en/doc/manual.pdf)

- Browser Tutorial Statistic  
[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_statistics\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_statistics_en/doc/manual.pdf)

## Tutorials

### New

#### Browser Tutorial Backend Filter

[3.9.8]

You can extend the list view in the TYPO3 backend with filters.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_befilter\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_befilter_en/doc/manual.pdf)

#### Browser Tutorial Calendar

[3.9.6]

Publish your data in form of a calendar. Be aware: Only day's schedule is supported in the current version.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_cal\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_cal_en/doc/manual.pdf)

#### Browser Tutorial Downloads

[3.9.6]

Manage your downloads with the Browser! The Browser takes care of user access rights. It is counting hits and visits for downloaded files. See Tutorial Statistics below.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_downloads\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_downloads_en/doc/manual.pdf)

#### Browser Tutorial Statistics

[3.9.6]

Manage your statistics data with the Browser! The Browser collects hits and vistis for records and files. The statistics data is the basis for displaying the most frequented records or files. A good example are top 10 lists for news, products and records of your own database.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_statistics\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_statistics_en/doc/manual.pdf)

#### Browser Tutorial Userfunc

[3.9.6]

The Browser provides some user defined functions (userFunc). The tutorial is a overview with the reference.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_userfunc\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_userfunc_en/doc/manual.pdf)

#### BrowserMaps

[4.1.23]

You can publish your data supported by OpenStreetMap. See:

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_map\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_map_en/doc/manual.pdf)

## Extended tutorials

### Browser Tutorial CSV file, RSS feed and XML

[3.9.6]

Export your data into in CSV file (comma separated values). Publish your data in form of an RSS feed or in XML. The tutorial is extended with the part for exporting and downloading your data in CSV files.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_rss\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_rss_en/doc/manual.pdf)

### Browser Tutorial Search and Filter

[4.1.21]

The browser search engine. Filter your lists.

The tutorial is extended with a section for hierarchical check-boxes.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_search\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf)

[3.9.6]

The browser search engine. Filter your lists.

The tutorial is extended with a chapter for tree views.

[http://typo3-browser.de/typo3conf/ext/browser\\_tut\\_search\\_en/doc/manual.pdf](http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf)

# Functional Schematic

Develop TYPO3 eight times faster!

Illustration 44: Common way of TYPO3 extension development.

Illustration 45: TYPO3 extension development with the Browser.

The common way of TYPO3 extension development:

- You develop your own frontend plugin.
- You have to code your own PHP.
- You have to code your own TypoScript template.

TYPO3 extension development with the Browser:

- You don't need any frontend plugin.
- You don't need to code any line PHP.
- You have to code a TypoScript template for controlling the Browser.

## Save up to 85 percent of your development costs

Compare the costs for the development without and with the Browser in our example above.

We guess, that you can save 85 percent of the costs for the development of a frontend plugin, if you are using the Browser.

In our example you would need 16 hours for the development of your extension with a frontend plugin (4 hours for the backend plus 12 hours for the frontend). If you are using the Browser you would need 5:30 hours (4 hours for the backend plus 1:30 hours for the frontend). You would save 9:30 hours (nearly 60 percent) altogether.

You can test it with the case story "Grüne Autos". The case study demonstrates to build your own database with a lot of features within three hours. Sorry, the case study is in German only.

The claim of the Browser is: TYPO3 without PHP.

# Smarty

## The Browser supersedes Smarty

The Browser is able to supersede the template engine Smarty. This means: You can use every third party extension, which depends on Smarty without Smarty!

An example for the superseding is the extension Browser for Civserv. The illustrations below are from the manual of Browser for Civserv.

### The common way - with Smarty

Illustration 46: Workflow with civserv and the template engine Smarty

If you are using civserv as an example for an extension with smarty in the common way, you will have the following work flow:

- The civserv plugin (the backend in the illustration above) sends a query to the database.
- The database sends the result to the template engine Smarty.
- Smarty sends a completely rendered HTML result back to the civserv plugin.
- The civserv plugin sends the HTML result as content to the HTML body.

The TYPO3 API (the backend in the illustration above) hasn't any chance to process data for Real URL or the HTML head. SEO - Search Engine Optimisation - and the TYPO3 cache management are impossible.

### The better way - with the Browser

Illustration 47: Workflow with civserv and with the frontend engine Browser

You can use civserv with the frontend engine Browser:

- The Browser plugin sends a query to the database.
- The database sends the result back to the plugin.
- The Browser plugin process the data for Real URL, for the HTML head and the HTML body.

SEO - Search Engine Optimisation - and the TYPO3 cache management is available and you can use Real URL.

## Cost-Benefit Equation

### Example with civserv

Position	Civserv/Smarty	Civserv/Browser
Extensions	civserv smarty	civserv browser browser_civserv
Search Engine Optimisation	no	yes
Real URL	no	yes
TYPO3 Cache Management	no	yes

### Example with any other extension, which is using smarty

Position	Any/Smarty	Any/Browser
Extensions	any extension smarty	any extension browser browser TypeScript for any extension
Search Engine Optimisation	no	yes
Real URL	no	yes
TYPO3 Cache Management	no	yes

# FAQ

## Development

### It's possible, that devlog doesn't display all logs?

Yes it is.

Devlog is processing 1.000 logs at most in the default configuration.

This protects the space of the SQL database.

If you want enjoy all logs of the Development Reporting System (DRS), please increase the value for maximum rows in the devlog extension (see "Configuring devlog" on page 58).

### May I use the PHP Multi Byte Overload?

Please, don't use it.

Background: The Browser use PHP string functions of course. Some aren't multi-byte secure like `strlen()` and some others are multi-byte-secure like `mb_strlen()`. It's possible to overload the non secure string functions with the secure multi-byte functions. Please don't use this feature. You will get trouble in a multi byte environment:

- The A-Z-Browser won't be working proper.

The PHP property `mbstring.func_overload` has to be 0 - this is the default in your `php.ini`.

## Search

### Is it possible to search in fields, which aren't displayed?

Yes, you can search in table fields, which aren't displayed in the frontend. Use the TS property "search". See the Tutorial Search.

### May I use the TYPO3 Indexed Search Machine?

Yes, please add the HTML search comments in the HTML template, if you want to use indexed search.

## Team play

### Is there a Cache Management?

Yes, the Browser uses the TYPO3 cache management.

### May I use SimulateStaticDocuments and Real URL?

Yes, you may use SimulateStaticDocuments or Real URL.

There is a template example for Real URL for the file `locallang.php`. See the Tutorial Real URL.

### May I use the Browser with TemplaVoila?

Yes. The Browser is a frontend plugin. You can use it within TemplaVoila like any other frontend plugin.

## UTF-8

### Is the extension UTF-8 secure?

Yes, it should be.

### It seems that I have a problem with UTF-8 and Time Stamps

The Browser uses the PHP method `strftime` for format time stamps into a human readable format.

The Browser alter the result of the method from UTF-8 to ISO, if there are special signs like German Umlaute (Ä, Ö, Ü, ß) and if they are stored in UTF-8.

If you have any problem with the display of formatted time stamps and special signs, please deactivate the TypoScript property:

```
plugin.tx_browser_pi1 {
    format {
        strftime {
            utf8_encode = 0
        }
    }
}
```

## Web Accessibility Initiative (WAI)

The Browser uses tables for the list views and the single views. The tables are according to the guidelines of the Web Accessibility Initiative (WAI). Tables have a summary and uses the tags caption, thead, th and tbody.

Example code:

```
...
<table summary="Liste von Nachrichten mit Überschriften und Kategorien">
    <caption>Überschriften und Kategorien</caption>
    <thead>
        <tr>
            <th class="cell-0">...</th>
        ...
    </tr>
</thead>
<tbody>
    <tr>
        <td class ...
```

# Helpful suggestions

## Forum

If you have helpful suggestions, feel free to publish any question, bug or code snippet on

- <http://typo3-browser-forum.de/>

Posts are welcome in English and German.

## New Features and Bug Reports

You are welcome to post any question, bug or code snippet on TYPO3 forge.

Here you find feature announcements and bug reports.

See

- <http://forge.typo3.org/projects/show/extension-browser>

Illustration 60: TYPO3 Forge

## To-Do List

There is a lot to do. See the Browser on TYPO3 forge

- <http://forge.typo3.org/projects/show/extension-browser>

# Further Information

## About the plugin icon

Illustration 61: The logo

The concept of the icon:

- The cylinder is the common symbol for a database.
- The sheet is a symbol for the frontend.
- The colour of the stripe, orange, is the colour of the corporate design of Die Netzmacher, the company which created the extension Browser.

## Other extensions published by Die Netzmacher

-  [autositemap](http://typo3.org/extensions/repository/view/autositemap): A smart site-map optimised for the footer. It groups menus in columns. Great menus will get two columns. Configuration is based on TypoScript HMENU.  
<http://typo3.org/extensions/repository/view/autositemap>
-  [Green Cars \(Grüne Autos\)](http://gruene-autos.org/) - Database optimized for ecological cars. It is a case study and demonstrates, how to get a complex database with the Browser in three hours only.  
<http://gruene-autos.org/>
-  [Jobmarket](http://typo3-job-market.de/) is a catalogue with job offers. Views, the a-z-browser, the page-browser, the search, social bookmarks and a lot of other stuff can configured by the Browser plugin with the mouse. Job Market hasn't any PHP code, it should be easy to adapt it to your needs.  
<http://typo3-job-market.de/>
-  [Majordomo](http://typo3.org/extensions/repository/view/majordomo/current/): For subscribing to and unsubscribing from a majordomo mailing list.  
<http://typo3.org/extensions/repository/view/majordomo/current/>
-  [Organiser](http://typo3-organiser.de/) provides a lot of features for handle news, events, staff, headquarters, locations, repertoire, workshops and a calendar. Sell your online tickets! Available from April of 2011  
<http://typo3-organiser.de/>
-  [Quick Shop \(extkey: quick\\_shop\)](http://typo3-quick-shop.de/): The fastest shop in the history of TYPO3. Install it with one mouse click only! Quick Shop is based on the Browser and powermail.  
<http://typo3-quick-shop.de/>
-  [PDF Controller](http://typo3-pdfcontroller.de/): Easy to install. Add to your HTML page the PDF-controller-button. Link from the button to the controller. Adjust the controller by mouseclicks. The PDF Controller supports CSS 3.  
<http://typo3-pdfcontroller.de/>
-  [seo\\_dynamic\\_tag](http://typo3.org/extensions/repository/view/seo_dynamic_tag/current/): Search Engine Optimisation. You can generate values dynamically with this extension especially for the <title>-tag, for the <meta>-tag description and the <meta>-tag keywords.  
[http://typo3.org/extensions/repository/view/seo\\_dynamic\\_tag/current/](http://typo3.org/extensions/repository/view/seo_dynamic_tag/current/)
-  [TSconfig Pages and Users by extManager \(extkey: tsconf\)](http://typo3.org/extensions/repository/view/tsconf/current/): Configure the the eight most commonly used TSconfig properties with the mouse - like page tree uids, activated extended view, activated clipboard, ...  
<http://typo3.org/extensions/repository/view/tsconf/current/>
-  [tt\\_news select configuration \(extkey: ttnews\\_selectconf\)](http://typo3.org/extensions/repository/view/ttnews_selectconf/current/) enables to select tt\_news by any SQL clause. The extension adds an andWhere clause to the SQL query of the tt\_news plugin. I. e. it is possible to display tt\_news items in dependence on the ownership of a fe\_user.  
[http://typo3.org/extensions/repository/view/ttnews\\_selectconf/current/](http://typo3.org/extensions/repository/view/ttnews_selectconf/current/)
-  [Wine Catalogue](http://typo3-wine.de/) provides a data base for wine with regions, wineries, styles, variety and ageing among others. It is localized. English, German and Spanish ist of the box. Wine based on the extension Browser.  
<http://typo3-wine.de/>

# About the Authors

## Dirk Wildt

Leader

Did the job of complete integration into the Browser.

## Known bugs

There are a lot of bugs known. See

- <http://forge.typo3.org/projects/show/extension-browser>

# Change Log

## 4.1.23 New Features

- \* #42173: OpenStreetMap: configurable zoomWheel  
Affected files:
  - \* static
  - \* constants.txt
  - \* setup.txt
- \* #42172: OpenStreetMap: configurable event mode  
Affected files: see #42173
- \* #42126: OpenStreetMap: individual design of control panel  
Affected files: see #42173

## 4.1.22 Bugfixing

- \* #42127: OpenStreetMap: filter aren't proper in Internet Explorer 8
  - oxMapConfig\_0.0.2.js -> oxMapConfig\_0.0.9.js
  - oxRenderMap\_0.0.2.js -> oxRenderMap\_0.0.9.js
- Affected files:
  - \* pi1/class.tx\_browser\_pi1\_map.php
  - \* res/html/map/default\_0.0.9.tml
  - \* static
  - \* setup.txt
  - \* downgrade/3.9.0/setup.txt
  - \* t3jquery.txt
- \* #42128: OpenStreetMap: filter aren't proper while using the zoom  
Affected files: see #42127
- \* #42129: OpenStreetMap: tooltips aren't proper  
Affected files: see #42127
- \* #41570: jquery.t3browser-0.0.2.js -> jquery.t3browser-0.0.3.js
  - marginBottomPx: width -> height
- Affected files:
  - \* res/js/jquery/plugins/jquery.t3browser/jquery.t3browser-0.0.3.js
  - \* static
  - \* setup.txt
  - \* downgrade/3.9.0/setup.txt
  - \* t3jquery.txt
- \* #00000: inc3ludeLibs -> includeLibs  
Affected files:
  - \* static/setup.txt

## 4.1.21 New Feature

- \* #41753: Treeview as checkbox
  - \* #41753.01: New COA TREEVIEW  
Affected files
    - \* pi1
      - \* class.tx\_browser\_pi1\_filter\_4x.php
      - \* class.tx\_browser\_pi1\_javascript.php
    - \* res/js/jquery
      - \* tx\_browser\_pi1\_cleanup\_x.x.x.js
      - \* tx\_browser\_pi1\_jstree\_x.x.x.js
    - \* static
      - \* constants.txt
      - \* setup.txt

## Improvement

- \* #41754: Filter: optimise performance
  - CHECKBOX is enabled for treeviews
  - \* #41754.01: \$arr\_andWhereFilter isn't never allocated
  - \* #41754.02: init\_aFilterIsSelected (boolean) is moved to get\_selectedFilters (array)
  - \* #41754.03: SQL optimisation: new method sql\_resAllItemsFilterWoRelation( )
  - \* #41754.04: Improve performance reports  
Affected files
    - \* pi1
      - \* class.tx\_browser\_pi1\_template.php
      - \* class.tx\_browser\_pi1\_wrapper.php

BE AWARE: It isn't tested in localised context

\* #41776: Make filter 4.x independent of filter 3.x

    Effected files:

- \* pi1
  - \* class.tx\_browser\_pi1\_cal.php
  - \* class.tx\_browser\_pi1\_filter\_4x.php
  - \* class.tx\_browser\_pi1\_filter\_4x.php
  - \* class.tx\_browser\_pi1\_template.php

**Bugfix**

\* #41814: Filter: local table isn't proper, if hits aren't displayed

\* #41811: Filter areas: last item doesn't count hits

#### 4.1.20 Improvement

\* #00000: oxRenderMap 0.0.9

#### 4.1.19 Development

\* #00000: Treeview Checkboxes

#### 4.1.18 Improvement

\* #00000: t3jquery.txt for supporting the configuration of t3jquery

\* #00000: jsTree: non used files and folders are removed  
    jsTree TypoScript Constant Editor: dots and icons

\* #00000: jQuery 1.8.x is checked with success

\* #00000: res/js/jquery

    tx\_browser\_pi1\_jstree-3.9.21.js is moved to tx\_browser\_pi1\_jstree-4.1.18.js

**Bugfix**

\* #00000: res/js/tx\_browser\_pi1\_ajax-0.0.4.js

#### 4.1.17 Bugfix

\* #00000: oxRenderMap 0.0.7

#### 4.1.16 Bugfix

\* #00000: Filter areas: If any filter is matched in localised context, all records were displayed

\* #00000: Filter weren't displayed in case of any record doesn't matched

#### 4.1.15 Improvement

\* #41372: Filter areas: strings aren't supported proper

#### 4.1.14 Improvement

\* #00000: oxRenderMap 0.0.6

#### 4.1.13 New Features

\* #41057: Open Street Map with custom image layer;

    Effected files:

- \* pi1
  - \* class.tx\_browser\_pi1\_map.php
- \* static
  - \* constants.txt
  - \* setup.txt

\* #41129: Registers for rows and columns, first, last, even and odd

- \* browser\_numColumn
- \* browser\_numColumnFirst
- \* browser\_numColumnLast
- \* browser\_numColumnOdd
- \* browser\_numRow
- \* browser\_numRowFirst
- \* browser\_numRowLast
- \* browser\_numRowOdd

    Effected files:

- \* pi1/class.tx\_browser\_pi1\_template.php

**Improvement**

\* #00000: Update OpenLayers from 1.x to 2.10

    Effected files:

- \* static/setup.txt
- \* static/downgrade/3.9.0/setup.txt

**Bugfix**

\* #41051: UPPER causes bugs in some SQL engines. Solution UPPER -> upper

\* #00000: Invalid argument supplied for foreach() in

- \* lib

```
* class.tx_browser_cssstyledcontent.php line 904
* pi1
* class.tx_browser_pi1_cal.php line 2419
* class.tx_browser_pi1_filter_3x.php line 454
* class.tx_browser_pi1_filter_3x.php line 1105
* class.tx_browser_pi1_filter_4x.php line 4948
* class.tx_browser_pi1_localisation_3x.php line 863
* class.tx_browser_pi1_sql_auto.php line 2747
* class.tx_browser_pi1_sql_auto.php line 2748
```

#### 4.1.12 Bugfix

\* #11401: Filter: ###UID### replacement depends on localtable or foreigntable

#### 4.1.11 New Feature

\* #40959: Multiple plugins: Flexform [General] got the new property:

Views: If plugin is included by a foreign page, ...

If "add tx\_browser\_pi1[plugin]", the plugin will ignore piVars of other plugins of the current page.

Effected files:

```
* pi1
* class.tx_browser_pi1_flexform
* flexform_sheet_sDEF.xml
* locallang_flexform.xml
```

#### 4.1.10 New Feature

\* #00000: Register [General] of the plugin / flexform got the field "my comment"

##### Bugfix

\* #40958: Multiple plugins: if you are using multiple plugins but any filter, piVars are missing in the URL.

\* #40960: Multiple Plugins: Record Browser doesn't use piVars[plugin] in links to the single view

Effected files:

```
* pi1/class.tx_browser_pi1_navi_recordbrowser.php
* static/setup.txt
```

\* #00000: \* SearchForm: remove hiddden field for plugin

Effected files:

```
* res/sample/tt_news/default.tml
```

#### 4.1.9 Bugfixes

\* #40937: Empty list at start without any effect

#### 4.1.8 New Feature

\* #40495: Record browser links back to the list view depending on the last configuration

Thanks to http://freemedia.ch for sponsorship

Effected files:

```
* pi1/class.tx_browser_pi1_navi_recordbrowser.php
* pi1/class.tx_browser_pi1_session.php
* static/setup.txt
```

#### 4.1.7 New Feature

\* #41055: Enable OSM (map) to process category icons delivered by the database

Effected files:

```
* pi1/class.tx_browser_pi1_map.php
* static/contstants.txt
* static/setup.txt
```

##### Improvements

\* #00000: Plugin check: record storage page and access to root level records

##### Bugfixes

\* #00000: Plugin check: Fatal error, if plugin wasn't never saved

\* #40354: Checkbox without input-tag

Effected file: static/setup.txt

\* #40354: Checkbox and radiobuttons

```
* items without proper line breaks
* items without a name
* items without hits
```

Effected files:

```
* pi1/class.tx_browser_pi1_filter_4x.php
* static/setup.txt
```

#### 4.1.6 Update

\* #00000: Sponsors

- \* Drei Gorillas
- \* r-system

#### 4.1.5 **Improvements**

- \* #00000: static/setup.txt
- Bugfix
- \* #00000: static/setup.txt

#### 4.1.4 **New Feature**

- \* #00000: Filter for map
  - Affected files:
    - \* pi1/class.tx\_browser\_pi1\_map.php
    - \* static/contstants.txt
    - \* static/setup.txt

#### **Bugfix**

- \* #00000: Array error in lib/class.tx\_browser\_befilter\_hooks.php::getDBlistQuery

#### 4.1.3 **Improvement**

- \* #00000: Code is cleaned up in class.tx\_browser\_pi1\_views.php
- \* #38612: Record browser is able to overwrite sys\_lsystlanguage\_overlay temporarily (freemedia case)
  - Affected file: static/setup.txt

#### 4.1.2 **Improvement**

- \* #00000: Record browser got an own class. See class.tx\_browser\_navi\_recordbrowser.php
- \* #38612: Record browser respects all items of the listview and not only the displayed one
- \* #00000: Session management of the record browser differs languages
- \* #00000: navi class moved to navi\_3x class

#### **Bugfix**

- \* #38611: Pagebrowser is confused in localisation mode

#### 4.1.1 **Improvement**

- \* #00000: Extension Manager. Affected file: ext\_conf\_template.txt

#### 4.1.0 **New Feature**

- \* #32654: OpenStreetMap

#### 4.0.0 **Publishing**

- \* #00000: Release 4.0.0

#### 3.9.26 **Bugfixes**

- \* #00000: flexform values for jQuery UI missed in some cases
- \* #00000: single view doesn't detect images proper

#### 3.9.25 **Bugfixes**

- \* #00000: indexBrowser ignored the TS andWhere
- \* #00000: pageBrowser ignored the TS andWhere
- \* #00000: pageBrowser ignored localisation in some cases

#### 3.9.24 **Improvement**

- \* #37731: noItemMessage becomes cObject. Before it was a stdWrap only
- \* #00000: content\_dieIfEmpty with improved error message

#### **Bugfixes**

- \* #00000: pageBrowser counted 0 records, if indexBrowser was disabled
- \* #00000: multiple plugins: piVars aren't ignored
- \* #00000: Message of empty list at start isn't rendered
- \* #00000: Missing argument 1 for tx\_browser\_pi1\_sql\_auto::get\_joinsSetCsv()
- \* #00000: Missing argument 1 for tx\_browser\_pi1\_sql\_auto::get\_statements\_whereLL()

#### 3.9.23 **Improvement**

- \* #00000: locallang\_db.xml

#### 3.9.22 **Improvement**

- \* #00000: optimising five tree views

#### 3.9.21 **Improvement**

- \* #00000: enable more than one tree view by default

#### 3.9.20 **Improvement**

- \* #00000: tree view performance

- 3.9.19 **Bugfix**  
\* #00000: andWhere search -> trim tableFields
- 3.9.18 **Bugfix**  
\* #00000: andWhere is ignored  
\* #00000: image in single view is not detected as image
- 3.9.17 **Bugfix**  
\* #00000: Downward compatibility with TYPO3 4.5
- 3.9.16 **Bugfix**  
\* #00000: First filter item counts hits  
First filter item counts hits in the tree view proper
- 3.9.15 **New feature**  
\* #37165: DAM sample  
**Bugfix**  
\* #12738: ###CLASS### marker for rows (even/odd)  
\* #00000: Labels for jQuery UI in the Flexform were broken
- 3.9.14 **Improvements**  
\* #00000: Static template for downgrade  
New files: static/downgrade/3.9.0/\*  
**Bugfixes**  
\* #00000: Debugging special chars  
Affected file: pi1/locallang\_flexform.xml
- 3.9.13 **Development**  
\* #36842: Localise the index browser in version 4.0  
\* #33892: Performance/Engine 4: navigation, list view
- 3.9.11 **Bugfix**  
\* #13186: Ordering: none -> 'none'
- 3.9.10 **Improvements**  
\* #35032: Handle HTML templates 3.x compatible
- 3.9.9 **New Features**  
\* #33826: Supporting of the \$cObj for filter  
\* #33892: Optimisation of performance - Step II  
**Bugfixes**  
\* #35014: Download module +++ Bug with hidden localised records  
\* #34212: TypoScript limit hasn't any effect  
**Improvements**  
\* #00000: a-z-browser is renamed as index browser  
Effects  
\* CSS : azSelector -> indexBrowser  
\* HTML templates : AZSELECTOR -> INDEXBROWSER  
\* piVar : azTab -> indexBrowserTab  
\* TypoScript : navigation.a-z\_Browser -> navigation.indexBrowser
- 3.9.8 **New Features**  
\* #33892: Optimisation of performance - Step I  
\* #33673: Backend filter  
**Development**  
\* #32654: Integration of Open Street Map - Step II  
**Bugfixes**  
\* #33829: HTML-template: <div>-tag has to change place  
**Effected files**  
\* /res/html/default tmpl  
\* /res/html/default\_ul tmpl  
\* /res/sample/tt\_news/default tmpl
- 3.9.7 **Improvement**  
\* #30912: Filter: case 'like'
- 3.9.6 **UPDATE**  
\* #00000: default.html and default\_ul.html is moved from res/ to res/html/  
You have to edit the Browser plugin:  
\* Tab [Templating]: Update the value of the template

\* Tab [General]: Update the value of the selected view (optional)

### New Features

- \* #32223: Category tree
  - \* static/setup.txt
  - \* displayList.master\_templates ...
    - \* ... category\_menu.first\_item.stdWrap
    - \* ... checkbox.first\_item.stdWrap
    - \* ... radiobuttons.first\_item.stdWrap
    - \* ... selectbox.first\_item.stdWrap
  - is moved to value\_stdWrap
  - \* displayList.master\_templates ...
    - \* ... category\_menu.wrap.item.stdWrap
    - \* ... checkbox.wrap.item.stdWrap
    - \* ... radiobuttons.wrap.item.stdWrap
    - \* ... selectbox.wrap.item.stdWrap
  - is moved to ... item.wraps.value.stdWrap

\* #30912: Filter: independent total items

\* #00000: DRS displays warnings and errors exclusive

### Development

- \* #32654: Integration of Open Street Map - Step I

### Improvement

- \* #33535: Clean up handleAs
- \* #00000: Constant plugin.tx\_browser\_pi1.strftime is moved from %a, %d.%b.%y to %a, %d.%b.%y %H:%M

### Bugfixes

- \* #32676: Link to single view without mode parameter

## 3.9.5

### Bugfix

- \* #32220: Wrong path to jQuery UI and AJAX files when TYPO3 resides in a subdirectory

## 3.9.4

### Improvements

- \* #32119: Marker becomes cObject downwards compatible

### Bugfix

- \* #32254: Wrong relation building

## 3.9.3

### New Features

- \* #32117: Condition for filters
- \* #32099: Control plugins by URL parameters
- \* #31230, 31229: Statistics module
- \* #29370: CSV export
- \* #29042: Calendar (first part and unofficial. Calendar should be official in version 4.2.0 in 2012)
- \* #28562: Integration jQuery UI. Here: oddClass.
  - \* New marker
  - \* #####TD\_COUNTER####, #####TD\_FIRST\_LAST####, #####TD\_EVEN\_OR\_ODD####
  - \* #####TH\_COUNTER####, #####TH\_FIRST\_LAST####, #####TH\_EVEN\_OR\_ODD####
  - \* #####TR\_COUNTER####, #####TR\_FIRST\_LAST####, #####TR\_EVEN\_OR\_ODD####
- \* See: displayList.templateMarker.oddClass

- \* #00000: New tutorial "Browser Tutorial User Defined Functions" (browser\_tut\_userdefined\_en)
- \* #00000: New tutorial "Browser Tutorial Download Module" (browser\_tut\_downloads\_en)
- \* #00000: New tutorial "Browser Tutorial Statistics" (browser\_tut\_statistics\_en)

### Improvements

- \* #32145: Record browser: home button links to the list view
- \* #00000: Record browser: showUid can replace by TypoScript constant. See plugin.tx\_browser\_pi1.recordBrowser.uidName
- \* #32119: Marker becomes cObject
- \* #29198: Simplifying stdWrap of SQL query parts
- \* #29042: HTML id of the plugin moved from cXX-tx-browser-pi1 to cXX-tx-browser-pi1-view-mode where XX is the id in the table tt\_content, view is list or single and mode is the id of the mode
- \* #00000: Integration of the button method into the old ajax object.  
res/js/tx\_browser\_pi1\_ajax.js moves to res/js/tx\_browser\_pi1\_ajax-0.0.2.js

### Bugfixes

- \* #29444: Category menu: Selected isn't detected
- \* #29336: Flexform field has an invalid value
- \* #29186: Empty rows are tested with ==null instead of empty( )
- \* #29323: method ajaxifyOrderBy is undefined. Affected file: res/js/tx\_browser\_pi1.js

## 3.8.0

### Improvement

\* #36707: Handle empty showUid

**Bugfix**

\* #36704: Bugfix for Browser for Civserv (browser\_civserv)

**3.7.9 Improvement**

\* #00000: Plugin 3 - manuals - link to local PDF files, but not to the TER.

**3.7.8 Bugfix**

\* #32220: Wrong path to jQuery UI and AJAX files when TYPO3 resides in a subdirectory

**3.7.7 Bugfix**

\* #35220: \$cleanedArrKeywd = array\_unique( (array) \$cleanedArrKeywd )

**3.7.5 New Feature**

\* #00000: page tree icon

**Improvements**

\* #34966: Proper order by in case of TCA type none

    Affected file: pi1/class.tx\_browser\_pi1\_sql\_functions.php

\* #29073: GPvar is deprecated

    Affected file: static/setup.txt

**Bugfix**

\* #34963: Counter for table rows out of order

    Affected file: pi1/class.tx\_browser\_pi1\_template.php

    Thanks to Bjoern Jacob / Tritum for the bug report

\* #13186: \$GLOBALS['TYPO3\_DB']->sql\_field\_type get a wrong parameter

    Affected file: pi1/class.tx\_browser\_pi1\_sql\_functions.php

    Thanks to Fabian Constien for the bugfix

**Sponsors**

\* #00000: New sponsor: lieska.net

**3.7.4 Bugfix**

\* #32689/#32254: Performance - wrong relations for JOINs in case of simple relations

**3.7.3 New Feature**

\* #31156: Option to display list view instead of single in single view mode

**Improvement**

\* #9912: Browser is fit for TYPO3 4.6

**Bugfix**

\* #31200: A-Z-Browser had removed '-' and '\_' in URL

**3.7.2 Bugfixes**

\* #31077: AJAX: JSS files are missing in some cases

**3.7.1 Bugfixes**

\* #29778: Error in flexform css.browser

**3.7.0 New Features**

\* #27041: Record browser for the single view / Prev-next Switcher in the single view

    \* single views got the marker ###RECORD\_BROWSER### in the HTML templates

    \* Affected files:

        \* res/default tmpl

        \* res/default\_ul tmpl

        \* res/sample/tt\_news/default tmpl

    \* Changes in TypoScript

        \* a-z\_Browser moved to navigation.a-z\_Browser

        \* modeSelector moved to navigation.modeSelector

        \* pageBrowser moved to navigation.pageBrowser

        \* plugin moved to flexform

\* #28657: Development feature: Make empty markers replaceable

**Development**

\* #28562: Integration of the completely UI (User Interface) 1.8.14 from <http://jqueryui.com/themeroller/>

    This feature will be integrated completely and documented in 4.0.0!

    \* Affected files:

        \* res/default tmpl

        \* res/default\_ul tmpl

        \* res/sample/tt\_news/default tmpl

**Update**

\* #00000 jQuery library 1.6 -> 1.6.2

**Miscellaneous**

\* #00000: PHP: substitute\_marker() is moved to substitute\_tablefield\_marker()

**Bugfixes**

\* #28878: Empty list at start: Form is empty for ever

\* #28855: Broken RSS-Feed

\* #28856: RSS template had a wrong marker (tt\_news sample)

3.6.5

**New Feature**

\* 13429: Embedding jquery and other javascript code is controlled by the flexform

**Bugfixing**

\* 00000: Hook row\_single Consolidated didn't update the result proper  
effected file: class.tx\_browser\_pi1\_template.php

3.6.4

**New Feature**

- 13920: Area and interval: get parameters with date

**Bugfixing**

- 13930: Socialmedia: Alias for showuid isn't handled

- 00000: Calender: first row got wrong values while filtering

3.6.3

**New Feature**

- 13803: Ordering children record

**Bugfix**

- 13807: Single view: Childrens aren't devided proper

3.6.2

**New Features**

\* 13597: TypoScript snippet for additional parameters

\* 13145: Number formats: userfunc

\* 12813: Added hook rows\_filter\_options

\* 12723: Added hooks BR\_TemplateElementsHook and BR\_TemplateElementsTransformedHook  
Thanks to Martin Bless

\* 12367: Disable wrapInPiBase by TypoScript

**Bugfixes**

\* 13573: Localisation: proper handle of languageField and transOrigPointerField

\* 13505: Empty AND in some localization context

\* 13464: foreach( ... ) is moved to foreach((array) ... )

\* 13008: Workflow devider will not be consolidated

**Maintenance**

\* 12310: Better error message for "Recursion Guard: Recursion is bigger than 0"

\* 12813: Hook rows\_filter\_Consolidated is moved to rows\_filter\_values

\* 00000: Integration of Tutorial Development in the tutorial list (pi3). Revision 43139

\* 00000: Integration of Tutorial TCA in the tutorial list (pi3). Revision 43139

**Consolidation**

\* 00000: substitute\_t3globals\_recurse() was double: in marker and in zz

substitute\_t3globals\_recurse() is removed in marker

\* 00000: get\_t3globals\_value() was double: in marker and in zz

get\_t3globals\_value() is removed in marker

\* 00000: session\_marker() was double: in marker and in zz

session\_marker() is removed in zz

\* 00000: substitute\_marker\_recurse() was double: in marker and in zz

substitute\_marker\_recurse() is removed in zz

3.6.1

svn revision 43034

**New Features**

- 12756: Images got full tt\_content support

- 12707: Dynamic states/zones in the TCA backend

- 12528: Don't remove empty marker in TypoScript by default

TypoScript is effected: new property:

- advanced.downgrade.3\_6\_0.marker.in\_typoscript.remove\_emptyMarker = 0

- 12472: Constant markers should be COA able

- 12006: Simulate a single record with its uid in a list view plugin

- 12005: Blank the manual sort field by TypoScript configuration

- 11981: Name views in TypoScript

- 11603: Configuration to hide rows with empty values

Thanks to Paedagogische Hochschule Zentralschweiz, <http://www.phz.ch/>, who has ordered this feature

**Bugfixes**

- 12471: general\_stdWrap isn't local

- 11973: DRS reported autoconfig.consolidation.sql.rows.unique is FALSE && true at the same time.

Thanks to Christian Weiske / netresearch.de for bug report and code for fixing

- 11886: Search does not work with multiple plugins on the same page  
Thanks to Christian Weiske / netresearch.de for bug report and code for fixing
- 11870: orderBy ( SUBSTRING(field FROM 3)) does not work  
Thanks to Christian Weiske / netresearch.de for bug report and code for fixing
- 11844: Filter: local table without value in select box
- 11785: Hooks are moved on the top in pi1/class.tx\_browser\_pi1\_template.php

**Tasks**

- 11847: OrderBy box: proper selected
- 11846: Integrate hook tutorial

### 3.6.0

**New Features**

- 11785: Hooks
- 11650: Simple relations: Configurable foreign table field. Thanks to cweiske
- 11580: Configurable: Should the search respect filters?
- 11523: Hide the update report for public
- 11402: Filter for areas
- 11401: Filter for local table
- 11211: Wrap for image and image caption with the image number
- 11204: If a record hasn't any image, a alternate image will be displayed by default
- 8807: Category Menu

**Task**

- 10858: Conflict between page browser and views

**Bugfixes**

- 11579: Unproper sword test fails in case of \_GET
- 11430: bug in whereClause bugfix: " AND " gets unconditionally removed. Thanks to cweiske
- 11429: no enablecolumns (enablefields) leads to sql error. Thanks to cweiske
- 11418: Wrong error message: "You didn't have uploaded any template!" Thanks to cweiske
- 11407: Ordering filter items hasn't any effect
- 10762: ###CLASS### won't be replaced
- 00000: Only one filter was handled (Version 3.5.903)

### 3.5.0

**New Features**

- 10221: RSS-Feed
- 9659: AJAX support, plugin tab [AJAX]
  - default tmpl, default\_ul tmpl, sample\_ttnews.tmpl
  - reset button got the class reset
  - listarea is wrapped with <div class="listarea">...</div>
- 8335: Filter with multiple select
- 8337: Filter with checkbox and radio buttons
- 9408: Display the number of hits in the filter items
- 10171: Plugin tab [Search / Filter]
- 10172: Plugin tab [development]

**Improvements**

- 00000: Improved templating
- 00000: Manual completely revised
- 00000: New tutorials AJAX, RSS, tt\_news\_sample
- 00000: Some tutorials revised

**Maintenance**

- 00000: template ###TEMPLATE\_SINGLE\_IMGTXT### is removed

### 3.4.5

**New Features**

- 10116: Array Advanced is local too
- 10067: Wizard Icons

**Bugfixes**

- 10111: Human readable format changes sql query
- 10054: A-Z-Browser: Default Tab doesn't get selected property

### 3.4.4

**New Features**

- 9917: Selecting a random sample from a set of rows. Browser Plugin no cache.
- 9879: Enable local autoconfiguration array (for each plugin)
- 9838: Simplifying relation building. Enabling several relations to one foreign table.

**Bugfixes**

- 9872: multisort\_mm\_children fails in case of one children

**Maintenance**

- 9860: Consolidation Code

### 3.4.3

**New Features**

- 9727: Order children records in a single view by mm sorting
- 9697: Relation building: Extend it for MM\_opposite\_field

**Improvements**

- 0000: TCA default label detection is extended in TypoScript and Plugin
  - imagecaption, imageseo, documents
- 9695: Plugin [Templating] field [data query]: Empty value is missing

**Bugfixes**

- 9708: ereg\_replace PHP 5.3 instead of preg\_replace
- 9689: Plugin template isn't view secure
- 9596: Several Plugins +++ Social Bookmarks are missing

**Credits**

- 9708: to Thomas Rehhoff for preg\_replace <> ereg\_replace (PHP 5.3)

### 3.4.2

**New Features**

- 9683: Selectable list views from TypoScript in the plugin
- 9599: Manual configuring of piVar showuid
- 9461: tt\_news-sample-template available by the plugin
- 9458: Destination pid for search form
- Browser got a favicon.ico. See /res/favicon.ico

**Suggestion**

- 9495: pagebrowser pointer in new search
- 9419: Upload Folder with auto slash
- 8434: Group list of values in single view

**Bugfixes**

- 9418: Wrong path to the upoad folder
- 9024: Fix was lost from 3.4.1 dev to 3.4.1 publish
- 8589: Fix was lost from 3.4.1 dev to 3.4.1 publish
- 8856: Fix was lost from 3.4.1 dev to 3.4.1 publish
- 8368: Fix was lost from 3.4.1 dev to 3.4.1 publish
- 8333: Fix was lost from 3.4.1 dev to 3.4.1 publish

**Credits**

- Thanks to Frank Sander for the code snippets: #8333, #8434, #9495, #9495

### 3.4.1

**New Feature**

- 9026: Editors are enabled to select layouts / TypoScript snippets by drop down menu
- 8856: First/Last/Odd/Even Classes for Items

**Bugfixes**

- 9025: Records won't be consolidated proper
- 9024: Filter and localization: default language only
- 8589: Javascript error message if no single view is configured needs to be encoded
- 8523: Localized children records won't be grouped
- 8368: Filters in URL to singleview -> overwriting tablefields
- 8333: special chars in A-Z Browser's item Pivar and class
- 0000: array\_keys(): The first argument should be an array in class.tx\_browser\_pi1\_zz.php line 1548

### 3.4.0

**New Feature**

- Social Media: Support for publishing data with Social Bookmarks

**Bugfix**

- 8553: Filter doesn't look for pid list
- 8343: first tablerow contains ###CLASS##

### 3.3.7

**New Features**

- groupBy: Field got the stdWrap property
- Query parts got the stdWrap property
- Override options for select, from, where, andWhere, orderBy and groupBy

### 3.3.6

**Bugfix**

- wrapper.php: \$this->pObj->arr\_children\_to\_devide will handle as array only
- zz.php: \$this->pObj->arr\_children\_to\_devide will handle as array only

### 3.3.5

**Improvements**

- Plugin: Tab [Advanced] moved to [Marker & RealUrl]
- The section RealUrl enables to configure, if parameters should used in links to a single view or not.
- Plugin: Tab [Listview] enables to configure, if swords should be colored in single views
- TypoScript code is shrinking

### 3.3.4

**New Feature**

- Multiple Plugins: Each plugin is enabled to handle the piVars from any other plugin.

**Bugfix**

- Multiple plugins displayed all views in single mode
- Colored swords: Swords didn't get any color in a single view

## 3.3.3

**New Features**

- Children got a TypoScript configuration child by child
- The new TypoScript property localTable.showUid4TableField enables a select query with the showuid for a foreign table

**Development**

- TypoScript property is removed: advanced.development.version.3\_1\_0.orderByPHP

## 3.3.2

**Improvement**

- 7730: Search with manual wildcards is enabled

## 3.3.1

**Bugfix**

- Invalid argument supplied for foreach() in class.tx\_browser\_pi1\_sql\_functions.php on line 2245

## 3.3.0

**New Features**

- Data can display by groups in list views
- Plugin got the registers [Templating] and [TCA]

**Improvements**

- Ordering by php: database fields will evaluated for an automatic setting of SORT\_STRING and SORT\_NUMERIC.
- The properties in the TCA will evaluated and the field types in the database will evaluated.
- Ordering by any sorting field is now possible.
- 7529: Items in select boxes of the filters became XHTML conform: htmlSpecialChars is true by default
- TypoScript property: advanced.sql.devider.childrenRecords  
Devider between values of children records can be configured by TypoScript

**Bugfixes**

- 7582: Conflict between default tab of a-z-browser and empty list by start
- 7159: Filter: Select boxes got the same id
- 7264: Filter: SQL query had a wrong order of order and group
- 7526: Index browser: Tab [All] didn't keep piVars in mind
- 6776: timestamps weren't rendered as timestamps in some cases

## 3.2.1

**New Features**

- Section Check List in the Manual

**Improvements**

- Check List is enhanced in the plugin

**Bugfix**

- 6468, #6518: desc becomes DESC in fieldnames

## 3.2.0

**New Subversion**

- New Features
  - Plugin Browser-Tutorials
  - Plugins got the tab Check-List
- Bugfix
  - 6468: Conflict between asc or desc and similar field names

## 3.1.6

**Improvement**

- Search is extended with operators "and" and "not".

**Bugfix**

- 5273: The default A-Z-tab isn't displayed in URL now  
See Reference: plugin.tx\_browser\_pi1.a-z\_Browser.defaultTab.display\_in\_url
- 5945, #6363: CSS/A-Z-Browser: All tabs were last tabs

**Improvement**

- displayList.display.searchform.resultPhrase.searchFor.and moved to displayList.display.searchform.and
- a-z\_Browser.defaultTab.realURL moved to a-z\_Browser.defaultTab.display\_in\_url

## 3.1.5

**Update Manual**

- Illustrations and link to the Case Study "Grüne Autos"

**Bugfix**

- 5922: PHP array error in context with missing filters

**Improvement**

- Marker #####minLenSword#### moved to ####advanced.security.sword.minLenWord#####

## 3.1.4

**Improvement**

- Plugin got the limit field

- Enabling the using of tables with translated fields in case of default language
- EmptyPageAtStart: PageBrowser won't be displayed
- #####SINGLEPID##### is a system marker
- pageBrowser.results\_at\_a\_time is replaced by the plugin
- Foreign tables can get their own pidList: See foreignTables.your\_table.csvPidList
- Plugin value titleWrap got priority over TypoScript value
- RealURL, search and filter are maintained

### 3.1.3 **Update Manual**

- Adding missing images and adding a key image

### 3.1.2 **New Features**

- The design of individual designs is simplified: You can use every database marker in the HTML code of list and single views. See the new tutorial below.
- Select box for ordering records
- TYPO3 \$GLOBALS are accessible from TypoScript. Markers will be replaced with their values

#### **New Tutorial**

- Browser Tutorial Marker en: Design your own layout.

#### **Improvement**

- default tmpl and default \_ul tmpl are extended with the subpart #####TEMPLATE\_SELECTBOX#####
- Search: resultphrase is extended with the minLen hint

#### **Bugfixing**

- Some columns left empty in list views under certain conditions

### 3.0.5 **Improvement**

- piVar azTab is removed, if there isn't used any a-z-browser
- Bugfix**
  - Localization
    - Orthography and syntax mistakes with exclude and mergeIfNotBlank
    - Counting mismatch for plugins
    - Replace bug in case of localization but non localized foreign tables

### 3.0.4 **Development**

- Filters got the override property for select, from and groupBy

### 3.0.3 **Development**

- mtime() is used up to TYPO3 4.2, getDifferenceToStarttime() is used from TYPO3 4.3
- Update PHP API data

#### **Bugfix**

- Adding \$GLOBALS['TSFE']->includeTCA()

### 3.0.2 **Maintenance**

- Browser suggests to install the Tutorial Browser and Development Log.

### 3.0.1 **Major Version Release**

#### **New Features**

- Multiple Plugins
  - Browser Plugins are unlimited on every page
- Localization
  - Browser can handle localized records
- Filter
  - You can add selectboxes to the search field
  - Flexform
    - You can configure some properties with the Browser plugin and without TypoScript
- TypoScript Update Assistant
- Consolidation
  - Browser will display only one record in the result list even if there are more than one children record. Values of children records will become a CSV list.
- Single views display 1:n relations
- A-Z-Browser tabs got the stdWrap property
- Security
  - Enhanced security handling of piVars

### 2.6.9 **Development**

Results got the limit property

#### **Maintenance**

Browser for Virtual Civil Services got an own extension key.

### 2.6.8 **Status**

Changed from alpha to beta

### **Development**

Simple relations become proper

Some Properties moved from TypoScript to the Plugin

## 2.6.6 **Maintenance**

Browser for BZD Staff Directory got an own extension key

## 2.6.4 **Maintenance**

Localization Development

TypoScript

- a-z\_Browser.defaultTab: Type is changed from string to integer.  
Value is now the key of the default tab and not the name.

## 2.5.9 **Maintenance**

devlog

## 2.5.5 **Maintenance**

We removed the TypoScript porperty (array): views.[list || single].X.override.

Clean up PHP code

## 2.3.8 **Maintenance**

Update manual and tutorial files

## 2.3.7 **Maintenance**

Simplification of real URL configuration

## 2.3.6 **Bugfixing**

In case of simulateStaticDocuments there was a URL rewriting with a double host

## 2.3.5 **Maintenance**

Extending the A-Z-Browser with the defaultTabWrap property

Extending SQL manual mode for single views

Integration of the function hierarchically order

### **Documentation**

Extending the manual with an example for

- the synonym function
- switching the HTML default template

### **Templating**

Extending the browser with a second template default\_ul tmpl.

It wraps lists as unordered lists instead of tables.

### **Bugfixing**

There wasn't any error message in case of a missing select property but an empty content

###UID### and ###PID\_LIST### weren't replaced in andWhere clauses in SQL auto mode

## 2.3.4 **Maintenance**

Update the manual

## 2.3.3 **Maintenance**

Simplifying the SQL query in case there is a configured search but there isn't any sword

### **Bugfixing**

There was a bug in case of using relation.mm and LEFT JOIN and more than two related tables.

There was a bug with handleAs['document']

## 2.3.1 **New Features**

Synonyms

Hierarchical order

## 2.2.1 **New Feature**

SQL query definition with JOINS manually

## 2.1.3 **Maintenance**

A-Z-Browser can process UTF-8 database and multi byte char set in PHP

## 2.1.1 **New Features**

TT\_CONTAINER

- TypoScript Template Container (TTC). Templating with TypoScript only.

DRS - Development Reporting System

The SEO meta tags title, keywords and description got the TypoScript stdWrap property.

## 2.0.1 **Major Version Release**

## New Features

SQL override

- You can override the system generated SQL clauses  
SELECT, FROM, WHERE and ORDER BY by TypoScript
- Warning: Feature is removed with version 2.5.5

Hooks

- You can override any SQL query and result in third party extensions

## New Workflow

SQL: Changing from FULL JOIN to LEFT JOIN.

## Maintenance

HTML-Template: The A-Z-Browser got a <div>-Tag

### 1.1.3 Maintenance

Code cleaning

### 1.1.2 Bugfixing

There was a mistake while counting cells.

CSS classes weren't proper.

### 1.1.1 New Feature

A-Z-Browser. Configurable by TypoScript

TypoScript example in res/a-z\_Browser.txt

## Manual

Updated

## Bugfixing

TCA internal\_type: There was a bug in case of relation and a missing internal\_type field in the TCA

### 1.0.2 Publishing

Browser (extkey: browser)

## Improvement

Error Messages

TCA config.type group

### 1.0.1 Major Version Release

New Tools like SQL Autorelation Building and Field Autowrapping

Renaming

- Browser (extkey: browser)
- Former: Frontend Database Browser (extkey: fe\_db\_browser)

### 0.1.3 Bugfixing: <a>-tag will be wrapped before stdWrap now

### 0.1.2 Bugfixing: Failure in an MySQL-Statement

### 0.1.1 Development: Adding the TS property andWhere

Maintenance: Adding a method index in class.tx\_feddbrowser\_pi1.php

Bugfixing: The HTML tag <tbody> was lost.

### 0.1.0 Development

SEO: Search Engine Optimisation

Real Url: Optimizing

Adding ext\_php\_api.dat

### 0.0.7 Optimizing

HTML classes, HTML template

Sorry, the manual missed in 0.0.6

### 0.0.6 Bugfixing

Images were not rendered in list view if there wasn't a single view.

### 0.0.4 Publishing

Frontend Database Browser (extkey: fe\_db\_browser)

### 0.0.1 Initial release

Frontend Database Browser (extkey: fe\_db\_browser)
